

QUARTERLY REVIEW

QM U.S. Small-Cap Growth Equity Fund – Multi-Class

As of June 30, 2020

PORTFOLIO HIGHLIGHTS

The portfolio produced a very strong positive return in absolute terms but underperformed its benchmark, the MSCI US Small Cap Growth Index, in the second quarter of 2020.

Relative performance drivers:

- Stock selection in the consumer discretionary, health care, and information technology sectors hurt the portfolio's relative performance.
- On the other hand, our stock choices among financials helped relative results.

Additional highlights:

- Despite the recovery in asset prices, the path to economic recovery remains uncertain, and some industries may remain challenged. We expect continued choppiness in the market.
- Volatility has been extraordinary, but our longstanding investment strategy and stock selection process remain the same. We continue to look for high-quality companies that generate good cash flows and are judicious in deploying capital.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit troweprice.com. Read it carefully. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The QM U.S. Small-Cap Growth Equity Fund-Advisor Class started operations on 7/5/16. It shares the portfolio of an existing fund (referred to as "investor class"). The average annual total return figures have been calculated using the performance data of the investor class up to the inception date of the Advisor Class and the actual performance results of the Advisor class since that date. The performance results have not been adjusted to reflect the 12b-1 fee associated with the Advisor Class; had this fee been included, performance would have been lower.

The T. Rowe Price Fund shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of the I Class (3/23/16) and the actual performance results of the I Class since that date. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher.

All investments are subject to risk, including the possible loss of the money you invest. The fund's strategy relies heavily on quantitative models to analyze data and construct investment portfolios. Relying on these models entails the risk that the models themselves may be limited or incorrect, that the data the models rely on may be incorrect or incomplete, and that the adviser may not be successful in selecting companies for investment or determining the weighting of particular stocks.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details. For Sourcing Information, please see Additional Disclosures.

PERFORMANCE REVIEW

Stocks Notch Best Quarter in Decades on Recovery Hopes

Stocks rebounded in the second quarter, with the major indexes recording their best quarterly performance in decades. Progress in the battle against the coronavirus boosted markets early in the quarter, with infection rates, hospitalizations, and deaths beginning to decline in early April in New York and other hard-hit areas. The turnaround encouraged the nation's governors to begin the gradual reopening of businesses and public facilities, while major firms resumed manufacturing operations in late April. After coasting lower for several weeks, however, the national number of daily diagnosed new cases began to climb in June, resulting in periodic selloffs in equities. The overall tone of economic data improved throughout the quarter and may have helped offset renewed coronavirus fears. After a historical plunge in April, payrolls surged by a record amount in May. Retail sales also bounced back, and several indicators suggested a recovery in manufacturing.

Stock Selection in the Consumer Discretionary Sector Hurt Relative Performance

- Service Corp International is a large provider of death-care services via funeral homes and cemeteries in North America, with a focus on more upscale facilities. Shares significantly lagged the sector and the broad market amid reduced pre-need cemetery sales during the pandemic and concerns that a weak economy will prompt customers to favor cremation or lower-cost funerals. There is also a regulatory overhang weighing on the stock as the Federal Trade Commission is considering revising industry regulations to increase price transparency of death-care services. However, we believe that the company will be able to adapt to any changes.
- Domino's Pizza delivered another positive return in the second quarter, though shares significantly lagged other consumer discretionary stocks that rallied more sharply in anticipation of a recovering economy. Nevertheless, we like how the company has adapted to the pandemic quickly and effectively by putting in place contactless delivery, new carryout procedures, and thorough store cleaning protocols so operations and throughput remain reliable. In addition, we believe this pizza delivery chain will continue to grow and gain market share over time as the company leverages its industry-leading digital eco-system, offers new products, and pursues new and innovative marketing opportunities.
- Bright Horizons Family Solutions is a provider of worksite childcare services in the U.S. and Europe. Shares appreciated but trailed in the broad market rally amid concerns that the company will face continuing challenges as economies reopen, such as capacity constraints from companies, regulators, and consumer demand. We continue to hold the shares, as we like this high-quality company's unique business model and believe that it will benefit from demand for childcare in an environment of undersupply. We also believe that the company should be able to opportunistically add childcare centers in a cost-effective manner as the economy takes time to recover.

Health Care Stock Choices Also Detracted From Relative Results

- Quidel is a manufacturer of diagnostics health care products and rapid diagnostic testing products. The company, which has a high return on invested capital and a reasonable valuation compared with its peers, recently received U.S. Food and Drug Administration (FDA) approval for an antigen test for COVID-19. We established a position in the second quarter; unfortunately, the timing of our purchase and our underweighting versus the benchmark did not enable us to benefit fully from the stock's brisk gains.
- Shares of Chemed, which operates VITAS Healthcare, a hospice and palliative care services business, as well as the Roto-Rooter plumbing business, produced mild gains and significantly trailed other companies in the sector. We trimmed our stake during the quarter in favor of other companies with better growth potential.

Our Information Technology Holdings Trailed Their Benchmark Peers

- Booz Allan Hamilton Holding is a highly regarded management consulting, technology, and engineering services company that works with the U.S. government and its agencies in defense and intelligence matters. Shares appreciated in the second quarter but lagged higher-risk technology stocks that rallied sharply. Nevertheless, we continue to believe that Booz Allan, which delivers differentiated cyber security products and services, will benefit over time as the government's spending on cyber security increases.
- CACI International is an IT services company that provides services to the federal government, especially national security and defense agencies. While we like the company's steady growth profile, which we believe bodes well for its long-term performance, the stock failed to keep up with the sector during the second-quarter rally.

Stock Choices in the Financials Sector Also Helped Relative Results

- MarketAxess Holdings operates a major electronic trading platform for domestic high-quality and high yield bonds. Shares surged during the quarter, propelled by strong earnings and revenues stemming from increased bond trading activity, as well new market participants using the company's trading platform. We believe that MarketAxess is a high-quality asset and that the company will increase its market share over time.
- Shares of Green Dot, the leading provider of general-purpose reloadable cards in the U.S., also performed well. Operational missteps had plagued the company last year; a new experienced CEO, better-than-expected quarterly results, and optimism as economies slowly reopen lifted investor sentiment. The bankruptcy of competitor Wirecard further boosted shares. We believe that the company could become a substantially larger platform over time with solid execution.

PORTFOLIO POSITIONING AND ACTIVITY

Stock selection in the portfolio is primarily based on our quantitative model, but we have the benefit of leveraging the fundamental research conducted by T. Rowe Price's equity analysts. In constructing the portfolio, our sector weights are usually in line with those of the MSCI US Small Cap Growth Index, but we will occasionally overweight or underweight certain sectors based on our analysis.

Health care, information technology, industrials and business services, and consumer discretionary are the portfolio's largest sector allocations as of June 30, and these sectors accounted for many of our purchases and sales during the quarter. We've highlighted some key trades from various sectors.

Health Care

- Masimo is a manufacturer of non-invasive medical monitoring technologies, such as pulse oximetry devices. The stock has performed very well this year, and while we continue to anticipate increased demand for the company's products over time, we reduced our stake to manage its position size in the portfolio, and because its market capitalization has increased toward the upper portion of the small-cap growth universe.
- Molina Healthcare is a Medicaid managed care company. The company contracts with various state governments to provide health care coverage for lower-income individuals. While we continue to believe that the long-term fundamentals of the managed care space remain favorable, we trimmed our position because its market capitalization and valuation have increased.

Information Technology

- During the quarter, we established a new position in Power Integrations, an analog semiconductor company focused solely on high power discrete integration. It has a strong patent portfolio, singular engineering focus, and unique process design that we believe result in superior products and higher gross margins than its peers.
- We added to our stake in Paylocity, a small- and medium-sized payroll company and human capital management vendor benefiting from the market migration from outsourced providers to software-as-a-service (SaaS) companies. It has above-average revenue growth that we believe could be sustained for some time. The company also has a high return on invested capital.

Industrials and Business Services

- We established a position in MSA Safety, a leading maker of safety equipment. The company is gaining market share in several product lines, and its respirator business is growing rapidly as companies are focusing on employee safety. The company has a strong management team, and we believe it has a good runway for margin opportunity.
- We also added UFP Industries (formerly Universal Forest Products) to the portfolio. This is a well-managed holding company whose subsidiaries supply wood and other building

materials to retail, construction, and industrial markets. The company is closely tied to the housing market, and we believe it will benefit from a cyclical recovery in the broader economy.

Consumer Discretionary

- Penn National Gaming is a casino operator whose shares rallied as economies reopened, allowing its casinos to resume operations. It is also a potential beneficiary of on-line sports betting in the future. We trimmed our holdings due to the stock's valuation and to manage its position size in the portfolio.
- We established a new position in RH, a luxury home furnishings retailer that curates and scales assorted products from artisans worldwide. With a strong brand and a long runway for growth, both in the U.S. and overseas, RH offers a strong risk/reward tradeoff.

MANAGER'S OUTLOOK

The rally in the second quarter was by fueled by optimism that COVID-19 was beginning to subside and by historic fiscal and monetary stimulus. The stimulus provided in the quarter was significantly larger than what was provided over multiple years following the 2008-2009 global financial crisis, and, if it remains as strong, we don't expect an immediate change in factor leadership.

Though much of the economy has begun reopening, there appear to be a few persistent trends that have carried through to this phase. For example, the travel industry may remain challenged, as many consumers are wary of close-quarters flights with strangers. Banks continue to face the headwind of near-zero interest rates, which will continue through at least 2022, according to recent Federal Reserve announcements. Brick-and-mortar retailers are under pressure as COVID-19 accelerated the structural shift to ecommerce and working from home appears to be the wave of the future, which will weigh on office property owners and the eco-system (e.g., restaurants) that rely on people going to the office.

Despite the recovery in asset prices, the path to economic recovery remains uncertain, and, as we write this commentary, we are seeing a resurgence of COVID-19 cases across the U.S. We expect continued choppiness in the market, which we feel is fully valued, until a vaccine is developed and we get a more permanent reopening.

The investment landscape has changed dramatically and abruptly, and volatility this year has been extraordinary at times, but we can assure you that our longstanding investment strategy and stock selection process remain the same. We take macroeconomic events into account in the course of monitoring portfolio risks, and we believe that having a bottom-up stock selection process, and not relying on sector bets versus our benchmark, helps us avoid risks due to large moves in any one sector. We continue to look for high-quality stocks of companies that generate good cash flows and are judicious in deploying capital. We believe that such companies will persevere through challenging economic and financial conditions and distinguish themselves over time with strong operating and share-price performance relative to lower-quality businesses. We are grateful for your continued confidence in our investment management abilities.
