

QUARTERLY REVIEW  
**Target Funds**

As of September 30, 2019

**PORTFOLIO HIGHLIGHTS**

The Target Funds underperformed their combined index portfolios for the three-month period ended September 30, 2019.

Relative performance drivers:

- Adverse security selection within certain underlying portfolios was the leading detractor from relative returns, particularly within U.S. large-cap growth stocks, emerging markets bonds and dynamic global bonds. Security selection in other portfolios lifted performance, particularly in the U.S. large-cap value equity allocation.
- Overweight allocations to U.S. small-cap equities, international equities, and emerging markets equities negatively impacted relative results.
- Out-of-benchmark exposure to diversifying sectors generated mixed relative performance. Most notably, the inclusion of dynamic global bonds and real assets equities weighed on relative results, while the inclusion of long-term U.S. Treasuries as a diversifying sector benefited returns.

Additional highlights:

- We remain modestly underweight stocks relative to bonds, as equity valuations remain extended against a backdrop of significant risks. At this stage of the current economic cycle, global stock markets appear susceptible to slower growth, waning earnings expectations, continued trade risks, and geopolitical unease. We expect equity and bond market volatility to remain elevated as concerns over monetary policy decisions and political risks unfold.
- For most of the funds, the equity portion of the Target Funds produced positive returns but underperformed the blended equity benchmark consisting of the Russell 3000 Index and the MSCI All Country World Index ex USA. The fixed income portion of the funds generated positive total returns but underperformed the Bloomberg Barclays U.S. Aggregate Bond Index.
- The dovish shift in monetary policy around the world and a broader easing of financial and liquidity conditions have reduced the near-term likelihood of a global recession. However, this current cycle of easing measures may leave global central banks ill-equipped to respond to a more pronounced downturn. While this step back from tightening policies should help to stabilize global growth, it will not, in our view, be sufficient to ignite a reacceleration in growth.

**Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](http://troweprice.com). Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit [troweprice.com](http://troweprice.com). Read it carefully.** The fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The principal value of the Target Funds is not guaranteed at any time, including at or after the target date, which is the approximate year an investor plans to retire (assumed to be age 65) and likely stop making new investments in the fund. If an investor plans to retire significantly earlier or later than age 65, the funds may not be an appropriate investment even if the investor is retiring on or near the target date. The funds' allocations among a broad range of underlying T. Rowe Price stock and bond funds will change over time. The funds emphasize asset accumulation prior to retirement, balance the need for reduced market risk and income as retirement approaches, and focus on supporting an income stream over a moderate postretirement withdrawal horizon. The funds are not designed for a lump-sum redemption at the target date and do not guarantee a particular level of income. The funds maintain a substantial allocation to equities both prior to and after the target date, which can result in greater volatility.

The Combined Index Portfolio for each fund includes the Russell 3000 Index, Bloomberg Barclays U.S. Aggregate Bond Index, MSCI All Country World Index ex USA, and Bloomberg Barclays U.S. Treasury Inflation-Protected Securities (TIPS) 1-5 Years Index. Each index is weighted at the appropriate strategic neutral allocation of its respective asset class, which is predetermined and changes over time.

The gross expense ratio reflects the fund expenses as stated in the fee table of the fund's prospectus prior to the deduction of any waiver or reimbursement. The net expense ratio reflects fund expenses as stated in the fee table of the fund's prospectus after the deduction of any waiver or reimbursement. The Funds operate under contractual expense limitations that expire on September 30, 2020.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details.

## PERFORMANCE REVIEW

### Global Markets Temperamental Amid Competing Narratives

Returns from global equities were mixed during the third quarter, led by modest gains in certain developed markets. In the U.S., large-cap shares rose while small- and mid-cap stocks declined amid heightened volatility. A renewed escalation in trade tensions between the U.S. and China and concerns about its detrimental impact on global growth weighed on markets. Fears of a recession also intensified, as disappointing economic data and an inversion of closely watched portions of the yield curve undermined investor sentiment. Conversely, equity markets were buttressed by accommodative developments on the monetary policy front, as the Federal Reserve (Fed) reduced short-term interest rates twice and other central banks around the world also took measures to sustain economic growth. Returns were mixed for European equities. German shares declined as weak data stoked recession concerns, while in the UK equities stumbled on the back of persistent Brexit uncertainty. Many developed Asian markets fell, particularly Hong Kong, which suffered a steep decline amid a period of significant civil unrest. Japanese shares climbed despite disappointing economic data, buoyed in part by progress on a tariff-reducing, bilateral trade deal with the U.S. Emerging markets stocks fared worse than developed markets, particularly in Latin America. Shares in Argentina plummeted following the ascent of presidential candidate Alberto Fernandez, which fueled concerns that his potential election could lead to populist policies and debt defaults.

U.S. bonds delivered positive returns in the third quarter, particularly among investment-grade issues. The Fed reduced its target for short-term interest rates by 50 basis points across two separate actions during the period, which marked the first such rate cuts in over a decade. Treasury yields fell across all maturities, with longer-term yields generally declining more than shorter-term yields. This resulted in a brief inversion of a key segment of the Treasury yield curve, which has historically been associated with an increased risk of a recession. High yield bonds posted positive returns but trailed investment-grade issues. Yields in developed markets outside the U.S. also declined during a period that saw the European Central Bank cut its key short-term interest rate and revive its quantitative easing program. Despite declining yields, returns for U.S. dollar investors were eroded as major currencies fell versus the dollar. Emerging markets bonds were mixed, as dollar-denominated debt generated positive returns, while local currency bonds declined on U.S. dollar strength.

### Three-Month Performance Review

The Target Funds underperformed their combined index portfolios for the three-month period ended September 30, 2019.

#### Security Selection Effect

- Security selection detracted from relative returns over the quarter. Adverse selection in U.S. large-cap growth stocks negatively impacted performance. U.S. mid-cap value stocks trailed their style-specific benchmark and also weighed on results.
- Within fixed income, security selection in the emerging markets bond and dynamic global bond strategies weighed on relative performance, as these portfolios lagged their respective benchmarks.
- Conversely, security selection within U.S. large-cap value stocks positively contributed to relative results. Security selection in the U.S. small-cap equity portfolios, which outperformed their respective benchmarks, also lifted returns. Outside of the U.S., international developed core and emerging markets equities outpaced their respective benchmarks and added value.

#### Allocation Effect

- Portfolio positioning weighed on relative results. An overweight allocation to U.S. small-cap stocks detracted, as the sector trailed U.S. large-cap stocks for the period. Our overweight allocation to international equities, which lagged U.S. equities, also hurt performance, as did an overweight allocation to emerging markets equities relative to developed market equities over the period.

#### Structural Effect

- The impact of out-of-benchmark exposure to diversifying sectors was mixed over the period. Inclusion of the dynamic global, high yield, and emerging markets bond strategies weighed on relative results, as these

sectors trailed the Bloomberg Barclays U.S. Aggregate Bond Index. Out-of-benchmark exposure to real assets equities, which trailed our blended equity benchmark, also hurt performance. This negative impact was partially offset by an underweight tactical allocation to the real assets sector.

- However, the inclusion of long-term U.S. Treasuries and hedged international bonds as diversifying sectors benefited relative performance, as these sectors outpaced the Bloomberg Barclays U.S. Aggregate Bond Index.

### Twelve-Month Performance Review

The Target Funds had mixed performance against their combined index portfolios for the 12-month period ended September 30, 2019. The shorter-dated funds underperformed for the period, while the longer-dated funds outperformed.

#### Security Selection Effect

- Security selection contributed to returns in the majority of funds for the period. Selection in U.S. large-cap value stocks bolstered relative performance. Selection within the U.S. small-cap equity portfolios also lifted results, as these allocations outpaced their respective benchmarks. Emerging markets equities outperformed their style-specific benchmark and added value.
- Conversely, security selection in U.S. large-cap growth, U.S. mid-cap value and international developed core equities, which trailed their respective benchmarks, detracted from relative returns. Within fixed income, emerging markets and dynamic global bonds weighed on performance, as the strategies trailed their respective benchmarks.

#### Structural Effect

- Out-of-benchmark exposure to diversifying sectors weighed on relative results. The inclusion of dynamic global bonds, high yield bonds, and floating rate loans negatively impacted relative performance, as these sectors trailed the Bloomberg Barclays U.S. Aggregate Bond Index.
- On the positive side, exposure to long-term U.S. Treasuries as a diversifying sector lifted relative results, as the sector outpaced the Bloomberg Barclays U.S. Aggregate Bond Index.
- Out-of-benchmark exposure to real assets equities proved helpful, as the real assets sector outperformed the blended equity benchmark.

#### Allocation Effect

- The impact of portfolio positioning was mixed over the 12-month period. An overweight allocation to U.S. small-cap stocks weighed on relative performance, as the sector trailed U.S. large-cap stocks. Our overweight allocation to emerging markets equities, which lagged developed markets equities, also detracted. An overweight allocation to international equities relative to U.S. stocks also proved unfavorable.
- However, an underweight allocation to equities for most of the period, which trailed fixed income securities, benefited relative results. In particular, our underweight to equities pared losses for the funds during the equity market downturn in late 2018. Our shift to a modest overweight to high yield bonds over the 12-month period also contributed to performance.

## PORTFOLIO POSITIONING AND ACTIVITY

### Favor Bonds Over Stocks

We remain modestly underweight stocks relative to bonds, as equity valuations remain elevated against a backdrop of significant risks. At this stage of the current economic cycle, global stock markets appear susceptible to slower growth, waning earnings expectations, continued trade risks, and geopolitical unease.

Accommodative monetary policy by major central banks has supported intermittent market rallies as the Federal Reserve has pivoted away from tightening and cut rates twice in 2019. While supportive policy may buoy equity markets in the near term, several durable headwinds persist. Despite optimism for a resolution to the U.S.-China trade dispute, a trade deal has remained elusive. We expect equity and bond market volatility to remain elevated as concerns over monetary policy decisions and political risks unfold.

Despite concerns over the global growth slowdown, which have led to less compelling yields in the bond market, we believe valuations more fully reflect concerns over persistent geopolitical tensions, weakening economic data, and our position late in the economic cycle. We continue to expect only modest returns from bonds, as they remain expensive relative to history and the current low-yield environment offers a weak foundation for significant upside.

## Equities

### Favor International Over U.S.

We are modestly overweight to equity markets outside the U.S., where valuations remain attractive relative to history. Though this appeal has been diminished by their greater exposure to risks from trade tensions, slower global growth, and a widening divergence between styles and sectors. U.S. stocks remain vulnerable to trade risks, particularly if the resolution of current disputes is substantially delayed. However, we believe the U.S. market is less susceptible to the impacts of slower global trade in comparison with other equity markets, such as Europe and Japan.

### Favor Emerging Markets Over Developed Markets

We are overweight to emerging market stocks relative to developed market stocks. Emerging markets offer attractive valuations supported by rising consumption and may benefit from lower interest rates in developed markets and softer U.S. dollar expectations. Chinese stimulus could be a boon for emerging markets broadly, but the extent of this impact is likely to be less pronounced than prior instances given the more measured response and greater domestic focus. Conversely, the persistent trade tensions between the U.S. and China could pose a more sustained headwind.

While idiosyncratic and political risks remain, the resilience of emerging markets broadly supports our conviction that these concerns do not pose a systemic risk. Many developing countries are less reliant on U.S. dollar funding than in the past, which may reduce the risk of a widespread financial crisis. We expect China's growth trajectory will stabilize, supported by fiscal stimulus and domestic demand.

### Favor U.S. Growth Over U.S. Value

We are overweight to U.S. growth stocks relative to U.S. value stocks. Valuations among growth stocks remain extended relative to value stocks but may offer better prospects for growth in the current market environment. While strong returns among growth stocks were particularly concentrated among tech and consumer-related companies in 2018, many of these names have traded lower in 2019 on concerns of heightened regulatory risks and rising trade tension. Notwithstanding the risk the U.S.-China trade dispute poses for supply chains among some technology companies, we expect secular growth companies to benefit in a sustained low-growth environment. Value stocks have higher exposure to cyclical sectors, and we have seen little evidence that this fiscal stimulus has provided a catalyst for durable expansion in economic growth.

### Favor International Growth Over International Value

We trimmed our overweight to growth stocks outside the U.S. relative to value stocks. Growth stock valuations are extended relative to history. While valuations among value stocks remain relatively attractive, slower global growth and a low interest rate environment remain headwinds. In the near term, cyclicals may outperform amid the potential for improvement in interest rates and global growth.

### Favor Small-Cap Over Large-Cap

We remain overweight to U.S. small-cap stocks, which continue to offer compelling valuations relative to U.S. large-cap stocks. While small-cap stocks were early beneficiaries from market concerns over trade risks, we recognize that they are not immune to other concerns that have also weighed on large-cap stocks, including a broader risk-off sentiment and disruption to global supply chains.

### Favor Global Equity Over Real Assets

We remain underweight real assets equities as we are cautious on the long-term prospects for energy and commodity prices, given continued advances in productivity growth in extractive industries, such as mining and drilling, and further signs of fading Chinese demand for industrial metals. Real estate investment trust (REIT) fundamentals are broadly positive, with muted supply growth and healthy levels of occupancy and rental income. Low rates are also supportive for REITs.

## Fixed Income

### High Yield Bonds

We are modestly overweight to high yield bonds. The yield carry on high yield bonds is attractive, while the sector is supported by broadly positive corporate fundamentals and low default expectations. Yields on U.S. investment-grade bonds remain low and should remain so in the near term as central bank posture has turned more accommodative. Given the current environment, we believe that high yield bonds can deliver equity-like returns with less expected volatility.

### Long-Term U.S. Treasuries

We are neutral to long-term U.S. Treasury bonds. Treasury yields have fallen from recent highs amid a growing preference for safe-haven assets. Despite their low yields, Treasury bonds have been negatively correlated with equities and may help provide ballast against an equity market downturn. Modest growth expectations and demand from institutional investors will likely continue to pressure rates lower at the long end of the curve, but this could be offset by increased deficit spending or a pickup in inflation expectations.

### Floating Rate Loans

We increased our exposure to floating rate bank loans and are now modestly overweight. In our view, the sector offers a favorable risk/reward profile and a relatively attractive yield carry.

### Dynamic Global Bonds

We have a neutral allocation to the dynamic global bond strategy. This strategy is designed to have less sensitivity to interest rates than a broad bond market index. Given our expectations for sustained equity and bond market volatility, we believe this strategy may offer valuable diversification benefits.

### Emerging Markets Bonds

We are overweight to emerging markets dollar-denominated bonds. Yields remain attractive relative to fundamentals but heightened political uncertainty and idiosyncratic risks in key markets could dampen returns.

### Hedged Nondollar Bonds

We are neutral to hedged nondollar bonds. On a currency-hedged basis, nondollar bonds offer comparable yields to U.S. investment-grade debt. Short-term rate differentials between the U.S. and other developed markets have led to more competitive hedged yields on bonds in Europe and Japan for U.S. dollar-based investors, while the interest rate risk associated with extended durations have tempered our view. Despite signs that economic growth may be softening in Europe, concerns over European Central Bank monetary policy and political risks could put upward pressure on European yields.

## MANAGER'S OUTLOOK

Markets have endured a turbulent period driven by marked uncertainty, as investors weigh the competing impacts of slowing global growth against a widespread pivot toward accommodative monetary policy. Manufacturing data, a commonly monitored indicator of economic conditions, has shown persistent weakness, which stoked fears of a coming recession. The bond market has also reflected this bearish sentiment, as investors have favored the relative safety of higher-quality debt, which sent Treasury yields sharply lower in 2019. During the third quarter, the bond market flashed another warning sign as closely watched portions of the Treasury yield curve inverted. Conversely, global stock markets have shrugged off bouts of volatility and remain near all-time highs, driven in large part by looser financial conditions. With markets sending mixed signals, we believe the trends in trade are most likely to drive the direction of the global economy. We have seen markets ebb and flow alongside the progress and setbacks surrounding trade talks, and while a trade deal between the U.S. and China in the near term seems unlikely, we continue to expect the tenor of negotiations to impact markets as the process unfolds. Against this backdrop of heightened uncertainty, we have taken a cautious approach and have sought to position our multi-asset portfolios broadly neutral from a risk perspective. Despite signs that the current economic cycle is aging, we believe the strong labor environment should continue to support consumer spending and underpin economic growth.

The dovish shift in monetary policy around the world and a broader easing of financial and liquidity conditions have reduced the near-term likelihood of a global recession. However, this current cycle of easing measures may leave global central banks ill-equipped to respond to a more pronounced downturn. While this step back from tightening policies should help to stabilize global growth, it will not, in our view, be sufficient to ignite a reacceleration in growth.

The return of sustained volatility, combined with above-average valuations in many asset classes against a backdrop filled with geopolitical and monetary policy risks, underscores the value of our thoughtful strategic investment approach. Given the confluence of positive and negative forces on the horizon that can drive global financial markets, we believe that our multi-asset portfolios' broad diversification and T. Rowe Price's strengths in fundamental research should help us perform in a variety of market environments over the long term.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](http://troweprice.com). Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit [troweprice.com](http://troweprice.com). Read it carefully. The fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

Analysis represents the total fund performance of each fund relative to its respective benchmark as calculated by T. Rowe Price's proprietary attribution model, and includes all underlying mutual funds.

**Value Added:** The performance difference between the portfolio and its custom benchmark.

**Structural Effect:** The impact of any differences between the portfolio's strategic neutral design and its benchmark, including the use of investment sectors that are not represented in the benchmark, and the performance differences between an asset class and the underlying investment sectors chosen to represent it.

**Allocation Effect:** The aggregate performance impact of differences in the portfolio asset classes and sector weights relative to their blended sector benchmarks. Totals for each effect may not be equivalent to underlying component pieces due to the exclusion of component effects that can be considered immaterial in size.

**Selection Effect:** The aggregate impact of the performance difference between the underlying sector portfolios and their respective sector indices.

Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit [troweprice.com](http://troweprice.com). Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit [troweprice.com](http://troweprice.com). Read it carefully.

The fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

<sup>1</sup> The T. Rowe Price Fund shares the portfolio of an existing fund (the original share class of the fund referred to as the "investor class"). The total return figures for the I Class shares have been calculated using the performance data of the investor class up to the inception date of all of the I Class funds (8/28/2015) and the actual performance results of the I Class since those dates. Because the I Classes are expected to have lower expenses than the Investor Classes, the I Class performance, had it existed over the periods shown, would have been higher.

## FUND MANAGEMENT

The Target Funds are managed by Jerome Clark and Wyatt Lee. Jerome and Wyatt are both members of the firm's Asset Allocation Committee. The portfolio manager is responsible for the day-to-day management of the Target Funds including portfolio positioning, performance, and risk-management oversight. The Target Funds asset allocation decisions are made by the firm's Asset Allocation Committee. The Committee is co-chaired by Charles Shriver, CFA, Target Allocation Portfolio Manager, and Rob Sharps, CFA, Head of Investments, Group CIO. The Committee includes some of the firm's most senior investment management professionals across major asset classes.

Individual security selection is made by portfolio managers of the Funds' component strategies drawing on the fundamental insights of T. Rowe Price's team of around 200 global research analysts.

## ADDITIONAL DISCLOSURES
