

PROSPECTUS

October 1, 2019

RPLCX

T. ROWE PRICE

Institutional Long Duration Credit Fund

The Securities and Exchange Commission (SEC) has not approved or disapproved these securities or passed upon the adequacy of this prospectus. Any representation to the contrary is a criminal offense.

Beginning on January 1, 2021, as permitted by SEC regulations, paper copies of the T. Rowe Price funds' annual and semiannual shareholder reports will no longer be mailed, unless you specifically request them. Instead, shareholder reports will be made available on the funds' website (troweprice.com/prospectus), and you will be notified by mail with a website link to access the reports each time a report is posted to the site.

If you already elected to receive reports electronically, you will not be affected by this change and need not take any action. At any time, shareholders who invest directly in T. Rowe Price funds may generally elect to receive reports or other communications electronically by enrolling at troweprice.com/paperless or, if you are a retirement plan sponsor or invest in the funds through a financial intermediary (such as an investment advisor, broker-dealer, insurance company, or bank), by contacting your representative or your financial intermediary.

You may elect to continue receiving paper copies of future shareholder reports free of charge. To do so, if you invest directly with T. Rowe Price, please call T. Rowe Price as follows: IRA, nonretirement account holders, and institutional investors, **1-800-225-5132**; small business retirement accounts, **1-800-492-7670**. If you are a retirement plan sponsor or invest in the T. Rowe Price funds through a financial intermediary, please contact your representative or financial intermediary, or follow additional instructions if included with this document. Your election to receive paper copies of reports will apply to all funds held in your account with your financial intermediary or, if you invest directly in the T. Rowe Price funds, with T. Rowe Price. Your election can be changed at any time in the future.

Investment Objective

The fund seeks to provide high income.

Fees and Expenses

This table describes the fees and expenses that you may pay if you buy and hold shares of the fund. You may also incur brokerage commissions and other charges when buying or selling shares of the fund, which are not reflected in the table.

Fees and Expenses of the Fund

Annual fund operating expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management fees	0.45%
Other expenses	—
Total annual fund operating expenses	0.45

Example This example is intended to help you compare the cost of investing in the fund with the cost of investing in other mutual funds. The example assumes that you invest \$10,000 in the fund for the time periods indicated and then redeem all of your shares at the end of those periods, that your investment has a 5% return each year, and that the fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

1 year	3 years	5 years	10 years
\$46	\$144	\$252	\$567

Portfolio Turnover The fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when the fund's shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the fund's performance. During the most recent fiscal year, the fund's portfolio turnover rate was 51.2% of the average value of its portfolio.

Investments, Risks, and Performance

Principal Investment Strategies The fund will normally invest in a diversified portfolio of longer duration debt instruments issued by corporations as well as certain noncorporate issuers. While the fund will focus on corporate bonds, the noncorporate debt instruments in which the fund may invest include securities issued by supranational organizations and U.S. and foreign governments and government agencies (including securities of issuers in emerging markets). There is no limit on the fund's investments in U.S. dollar-denominated foreign securities, but non-U.S. dollar-denominated foreign debt instruments are limited to 10% of the fund's total assets. Holdings will mainly consist of investment-grade debt instruments,

although the fund has the flexibility to purchase some noninvestment-grade bonds (also called high yield or “junk” bonds).

Interest rates and bond prices tend to move in opposite directions. Duration, which is expressed in years, is a calculation that attempts to measure the price sensitivity of a bond or bond fund to changes in interest rates. The longer a bond fund’s duration, the more sensitive that fund should be to changes in interest rates. For example, if interest rates rise by 1% and a fixed-rate bond has a duration of 10 years, it is estimated that the principal value of the bond will decrease by approximately 10%. While the fund may invest in debt instruments of any maturity or duration, the fund expects to normally maintain an effective duration within +/- 20% of the duration of the Bloomberg Barclays U.S. Long Credit Bond Index. As of July 31, 2019, the duration of the Bloomberg Barclays U.S. Long Credit Bond Index was 13.97 years. However, the duration of the fund and this index will change over time and could be significantly higher or lower during certain interest rate environments.

Under normal conditions, at least 85% of the fund’s net assets will be rated investment grade (AAA, AA, A, or BBB, or an equivalent rating) at the time of purchase by at least one of the major credit rating agency or, if not rated by any credit rating agency, deemed to be of investment-grade quality by T. Rowe Price. Such investment-grade investments could include “split-rated” securities, which are securities that are rated as investment grade by at least one credit rating agency but rated below investment grade by another agency. Up to 15% of the fund’s net assets can be invested in noninvestment-grade securities. Any investments in noninvestment-grade securities will be focused primarily on the higher-quality range (BB or an equivalent rating) of the high yield market and the fund will not purchase any individual bond that is rated B or below (or equivalent) by any major credit rating agency.

While most of the fund’s assets will typically be invested directly in debt instruments, the fund may use derivatives such as Treasury futures contracts, interest rate futures, interest rate swaps, and interest rate swap futures primarily in an effort to manage the portfolio’s duration or interest rate risk.

The fund may sell holdings for a variety of reasons, such as to adjust the portfolio’s average maturity, duration, or overall credit quality, or to shift assets into and out of higher- or lower-yielding securities or certain sectors.

Principal Risks As with any mutual fund, there is no guarantee that the fund will achieve its objective. The fund’s share price fluctuates, which means you could lose money by investing in the fund. The principal risks of investing in this fund are summarized as follows:

Active management risks The investment adviser’s judgments about the attractiveness, value, or potential appreciation of the fund’s investments may prove to be incorrect. The fund could underperform other funds with a similar benchmark or similar objectives and investment strategies if the fund’s overall investment selections or strategies fail to produce the intended results.

Fixed income markets risks Economic and other market developments can adversely affect fixed income securities markets. At times, participants in these markets may develop concerns

about the ability of certain issuers of debt instruments to make timely principal and interest payments, or they may develop concerns about the ability of financial institutions that make markets in certain debt instruments to facilitate an orderly market. Those concerns could cause increased volatility and reduced liquidity in particular securities or in the overall fixed income markets and the related derivatives markets. A lack of liquidity or other adverse credit market conditions may hamper the fund's ability to sell the debt instruments in which it invests or to find and purchase suitable debt instruments.

Interest rate risks The prices of, and the income generated by, debt instruments held by the fund may be affected by changes in interest rates. A rise in interest rates typically causes the price of a fixed rate debt instrument to fall and its yield to rise. Conversely, a decline in interest rates typically causes the price of a fixed rate debt instrument to rise and the yield to fall. Generally, funds with longer weighted average maturities and durations carry greater interest rate risk. In recent years, the U.S. and many global markets have experienced historically low interest rates. Although interest rates have begun to rise and may continue doing so, interest rates may decline in response to ongoing global trade disputes, increasing the exposure of bond funds to the risks associated with declining interest rates.

Prepayment and extension risks The fund is subject to prepayment risks because the principal on any debt instrument with an embedded call option may be prepaid at any time, which could reduce the security's yield and market value. The rate of prepayments tends to increase as interest rates fall, which could cause the average maturity of the portfolio to shorten. Extension risk may result from a rise in interest rates, which tends to make callable debt instruments more volatile.

Credit risks An issuer of a debt instrument could suffer an adverse change in financial condition that results in a payment default (failure to make scheduled interest or principal payments), rating downgrade, or inability to meet a financial obligation. The fund's exposure to credit risk is increased to the extent the fund invests in noninvestment-grade ("junk") bonds. Junk bonds should be considered speculative as they carry greater risk of default and erratic price swings due to adverse changes in the credit quality of the issuer.

Liquidity risks The fund may not be able to meet redemption requests without significantly diluting the remaining shareholders' interests in the fund. In addition, the fund may not be able to sell a holding in a timely manner at a desired price. Reduced liquidity in the bond markets can result from a number of events, such as limited trading activity, reductions in bond inventory, and rapid or unexpected changes in interest rates. Markets with lower overall liquidity could lead to greater price volatility and limit the fund's ability to sell a holding at a suitable price.

Foreign investing risks The fund's investments in foreign holdings may be adversely affected by local, political, social, and economic conditions overseas, greater volatility, reduced liquidity, or decreases in foreign currency values relative to the U.S. dollar. These risks are heightened for the fund's investments in emerging markets, which are more susceptible to governmental interference, less efficient trading markets, and the imposition of local taxes or restrictions on gaining access to the fund's investments.

Derivatives risks The fund uses Treasury futures contracts, interest rate futures, interest rate swaps, or interest rate swap futures, and is therefore exposed to additional volatility in comparison to investing directly in bonds and other debt instruments. These instruments can experience reduced liquidity and become difficult to value and, if not traded on an exchange, are subject to the risk that a counterparty to the transaction will fail to meet its obligations under the derivatives contract. The fund's principal use of derivatives involves the risks that adjustments to the fund's duration through derivatives will result in additional portfolio volatility and that anticipated interest rate movements will not be accurately predicted, which could lead to losses and significantly harm the fund's performance. Changes in regulations could significantly impact the fund's ability to invest in specific types of derivatives, which could limit the fund's ability to employ certain strategies that use derivatives.

Performance The following performance information provides some indication of the risks of investing in the fund. The fund's performance information represents only past performance (before and after taxes) and is not necessarily an indication of future results.

The following bar chart illustrates how much returns can differ from year to year by showing calendar year returns and the best and worst calendar quarter returns during those years for the fund.

The fund's return for the six months ended 6/30/19 was 15.28%.

The following table shows the average annual total returns for the fund, and also compares the returns with the returns of a relevant broad-based market index, as well as with the returns of one or more comparative indexes that have investment characteristics similar to those of the fund, if applicable.

In addition, the table shows hypothetical after-tax returns to demonstrate how taxes paid by a shareholder may influence returns. After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown. After-tax returns shown are not relevant to investors who hold their fund shares through tax-deferred arrangements, such as a 401(k) account or an IRA.

Average Annual Total Returns

	Periods ended December 31, 2018			Inception date 06/03/2013
	1 Year	5 Years	Since inception	
Institutional Long Duration Credit Fund				
Returns before taxes	-6.30 %	4.96 %	3.65 %	
Returns after taxes on distributions	-7.86	3.18	1.90	
Returns after taxes on distributions and sale of fund shares	-3.69	3.05	2.03	
Bloomberg Barclays U.S. Long Credit Bond Index (reflects no deduction for fees, expenses, or taxes)	-6.76	5.08	3.78 ^a	
Lipper Corporate Debt Funds BBB-Rated Average	-2.55	2.90	2.37 ^b

Management

Investment Adviser T. Rowe Price Associates, Inc. (T. Rowe Price or Price Associates)

Portfolio Manager	Title	Managed Fund Since	Joined Investment Adviser
Robert M. Larkins	Chairman of Investment Advisory Committee	2018	2003

Purchase and Sale of Fund Shares

The fund generally requires a \$1 million minimum initial investment and there is no minimum for additional purchases, although the initial investment minimum may be waived for certain types of accounts held through a retirement plan, financial advisor, or other financial intermediary.

For investors holding shares of the fund directly with T. Rowe Price, you may purchase, redeem, or exchange fund shares by mail or by telephone (1-800-638-8790).

If you hold shares through a financial intermediary or retirement plan, you must purchase, redeem, and exchange shares of the fund through your intermediary or retirement plan. You should check with your intermediary or retirement plan to determine the investment minimums that apply to your account.

Tax Information

The fund declares dividends daily and pays them on the first business day of each month. Any capital gains are declared and paid annually, usually in December. Redemptions or exchanges of fund shares and distributions by the fund, whether or not you reinvest these amounts in additional fund shares, may be taxed as ordinary income or capital gains unless you invest through a tax-deferred account (in which case you will be taxed upon withdrawal from such account).

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the fund through a broker-dealer or other financial intermediary (such as a bank), the fund and its related companies may pay the intermediary for the sale of fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ORGANIZATION AND MANAGEMENT

How is the fund organized?

T. Rowe Price Institutional Income Funds, Inc. (the “Corporation”) was incorporated in Maryland in 2000. Currently, the Corporation consists of seven series, each representing a separate pool of assets with different investment objectives. Each series is an “open-end management investment company,” or mutual fund. Mutual funds pool money received from shareholders and invest it to try to achieve specified objectives.

What is meant by “shares”?

As with all mutual funds, investors purchase shares when they put money in the fund. These shares are part of the fund’s authorized capital stock, but share certificates are not issued.

Each share and fractional share entitles the shareholder to:

- Receive a proportional interest in income and capital gain distributions. For funds with multiple share classes, the income dividends for each share class will generally differ from those of other share classes to the extent that the expense ratios of the classes differ.
- Cast one vote per share on certain fund matters, including the election of the fund’s directors, changes in fundamental policies, or approval of material changes to the fund’s investment management agreement. Shareholders of each class have exclusive voting rights on matters affecting only that class.

Does the fund have annual shareholder meetings?

The mutual funds that are sponsored and managed by T. Rowe Price (the “T. Rowe Price Funds”) are not required to hold regularly scheduled shareholder meetings. To avoid unnecessary costs to the funds’ shareholders, shareholder meetings are only held when certain matters, such as changes in fundamental policies or elections of directors, must be decided. In addition, shareholders representing at least 10% of all eligible votes may call a special meeting for the purpose of voting on the removal of any fund director. If a meeting is held and you cannot attend, you can vote by proxy. Before the meeting, the funds will send or make available to you proxy materials that explain the matters to be decided and include instructions on voting by mail, telephone, or the Internet.

Who runs the fund?

General Oversight

The fund is governed by a Board of Directors (the “Board”) that meets regularly to review the fund’s investments, performance, expenses, and other business affairs. The Board elects the fund’s officers. At least 75% of Board members are independent of T. Rowe Price and its affiliates (the “Firm”).

Investment Adviser

T. Rowe Price is the fund's investment adviser and oversees the selection of the fund's investments and management of the fund's portfolio pursuant to an investment management agreement between the investment adviser and the fund. T. Rowe Price is an SEC-registered investment adviser that provides investment management services to individual and institutional investors, and sponsors and serves as adviser and subadviser to registered investment companies, institutional separate accounts, and common trust funds. The address for T. Rowe Price is 100 East Pratt Street, Baltimore, Maryland 21202. As of June 30, 2019, the Firm had approximately \$1.13 trillion in assets under management and provided investment management services for more than 7 million individual and institutional investor accounts.

Portfolio Management

T. Rowe Price has established an Investment Advisory Committee with respect to the fund. The committee chairman has day-to-day responsibility for managing the fund's portfolio and works with the committee in developing and executing the fund's investment program. The members of the committee are as follows: Robert M. Larkins, Chairman, Steve Boothe, Michael P. Daley, Michael J. Grogan, Michael Lambe, Yongheon Lee, Samy B. Muaddi, Alexander S. Obaza, Miso Park, Theodore E. Robson, Jeanny Silva, Robert D. Thomas, Wesley Ross Trowbridge, Lauren T. Wagandt, Bineesha Wickremarachchi, and J. Howard Woodward. The following information provides the year that the chairman (portfolio manager) first joined the Firm and the chairman's specific business experience during the past five years (although the chairman may have had portfolio management responsibilities for a longer period). Mr. Larkins has been chairman of the committee since 2018. He joined T. Rowe Price in 2003 and his investment experience dates from that time. He has served as a portfolio manager with the Firm throughout the past five years. The Statement of Additional Information provides additional information about the portfolio manager's compensation, other accounts managed by the portfolio manager, and the portfolio manager's ownership of the fund's shares.

The Management Fee

The fund pays the investment adviser an annual all-inclusive management fee of 0.45% based on the fund's average daily net assets. The management fee is calculated and accrued daily and it includes investment management services and ordinary, recurring operating expenses, but does not cover interest; expenses related to borrowings, taxes, and brokerage and other transaction costs; or nonrecurring, extraordinary expenses.

A discussion about the factors considered by the Board and its conclusions in approving the fund's investment management agreement (and any subadvisory agreement, if applicable) appear in the fund's annual report to shareholders for the period ended May 31.

MORE INFORMATION ABOUT THE FUND'S PRINCIPAL INVESTMENT STRATEGIES AND ITS PRINCIPAL RISKS

Consider your investment goals, your time horizon for achieving them, and your tolerance for risk. If you can accept the possibility of share price declines in an effort to achieve high income, the fund could be an appropriate part of your overall investment strategy. The fund's emphasis on investment-grade debt instruments should offer higher income than is available from funds that invest primarily in U.S. Treasury securities. The addition of high yield bonds, noncorporate debt instruments and foreign securities provides the opportunity for higher income. The fund's share price should fluctuate less than that of a high yield bond fund.

The fund's yield will vary. The fund's yield is the annualized dividends earned for a given period (typically 30 days for bond funds), divided by the share price at the end of the period. The fund's total return includes distributions from income and capital gains and the change in share price for a given period.

Credit quality refers to a bond issuer's expected ability to make all required interest and principal payments on time. Because highly-rated issuers represent less risk, they can borrow at lower interest rates than less-creditworthy issuers. Therefore, a fund investing in high-quality securities should have a lower yield than an otherwise comparable fund investing in lower-quality securities.

Every bond has a stated maturity date when the issuer must repay the bond's entire principal value to the investor. However, many bonds are "callable," meaning their principal can be repaid before the stated maturity date. Bonds are most likely to be called when interest rates are falling because the issuer can refinance at a lower rate, just as a homeowner refinances a mortgage when interest rates fall. In that environment, a bond's "effective maturity" is usually its nearest call date. For example, the rate at which homeowners pay down their mortgage principal determines the effective maturity of mortgage-backed bonds.

A bond fund has no real maturity, but it does have a weighted average maturity and a weighted average effective maturity. Each of these numbers is an average of the stated or effective maturities of the underlying bonds, with each bond's maturity "weighted" by the percentage of the fund's assets it represents. (The fund's average effective maturity takes into consideration the possibility that an issuer may call a bond before its maturity date or, with respect to a pool of mortgages, the likelihood of prepayments on the mortgages.) Some funds utilize effective maturities rather than stated maturities when managing a fund to a certain average maturity, which provides additional flexibility in portfolio management.

Duration is a calculation that seeks to measure the price sensitivity of a bond or a bond fund to changes in interest rates. It is expressed in years, like maturity, but it is a better indicator of price sensitivity than maturity because it takes into account the time value of cash flows generated over the bond's life. Future interest and principal payments are discounted to reflect their present value and then multiplied by the number of years they will be received to produce

a value expressed in years—the duration. “Effective” duration takes into account call features and sinking fund payments that may shorten a bond’s life.

Since duration can be computed for bond funds, you can estimate the effect of interest rate fluctuations on share prices by multiplying the fund’s duration by an expected change in interest rates. For example, the price of a bond fund with a duration of five years would be expected to fall approximately 5% if interest rates rose by one percentage point. A bond fund with a longer duration will generally be more sensitive to changes in interest rates than a bond fund with a shorter duration. (The fund’s duration is shown in its shareholder report.)

The fund seeks to provide attractive long-term risk-adjusted performance by using bottom-up research to identify securities and industries with opportunities for income and/or price appreciation. The adviser seeks to evaluate long-term industry and sector trends while using independent credit research analysis and ratings to help eliminate investments with potentially deteriorating credit profiles. The fund focuses on longer duration investment-grade corporate and noncorporate credit securities with a particular focus on corporate bonds in the intermediate portion of the yield curve. Noncorporate credit securities will consist mainly of investment-grade, U.S. dollar-denominated bonds issued by U.S. governments and agencies, foreign agencies and local governments, and supranational organizations. While the fund generally seeks holdings with longer durations, the fund’s average duration could fluctuate significantly based on interest rate changes. The fund targets an average effective duration within +/-20% of the duration of the Bloomberg Barclays U.S. Long Credit Bond Index. However, the duration of this index will change over time and could be significantly higher or lower during certain interest rate environments, such as periods of high or rising interest rates. The fund may use Treasury futures, interest rate futures, interest rate swaps, and interest rate swap futures primarily in an effort to maintain the fund’s desired duration at the time, although such instruments may also be used as a tool to help manage cash flows into and out of the fund.

A Treasury futures contract involves an obligation to purchase or sell Treasury securities at a future date (which may be many months from the date of the contract) at a price set at the time of the contract. These contracts are standardized, are traded through a national (or foreign) exchange, and are cleared through an affiliate of the exchange that acts as the buyer to every seller and the seller to every buyer. A sale of a Treasury futures contract creates an obligation by the fund, as seller, to deliver the amount of certain types of Treasury securities called for in the contract at a specified future time for a specified price. A purchase of a Treasury futures contract creates an obligation by the fund, as purchaser, to take delivery of an amount of securities at a specified future time at a specific price. Interest rate futures can be sold as an offset against the effect of expected interest rate increases and purchased as an offset against the effect of expected interest rate declines. Interest rate swaps, which are an agreement between two parties where one stream of future interest rate payments is exchanged for another based on a specified principal amount, may be used by the fund to manage interest rate sensitivity. Interest rate swaps often exchange a fixed payment for a floating payment that is linked to a particular interest rate (such as LIBOR). Interest rate swap futures are instruments that provide a way to gain swap exposure and the benefits of futures in one contract. Swap futures are

futures contracts on interest rate swaps that enable purchasers to cash settle at a future date at the price determined by the benchmark rate at the end of a fixed period (typically between 2 and 30 years). The notional face value of the swap futures contract represents the fixed rate side of an interest rate swap that exchanges semiannual fixed rate payments for floating rate payments based on 3-month LIBOR. The fund's investments in swap futures are intended to provide a liquid means of managing interest rate exposure, offering the opportunity to trade actual interest rate swaps on a forward basis with the financial protections attendant to a standard futures contract.

As with any mutual fund, there is no guarantee the fund will achieve its objective. The income level of the fund will change with market conditions and interest rate levels.

The principal risks associated with the fund's principal investment strategies include the following:

Market risks The market price of investments owned by the fund may go up or down, sometimes rapidly or unpredictably. The fund's investments may decline in value due to factors affecting the overall markets, or particular industries or sectors. The value of a holding may decline due to general market conditions which are not specifically related to a particular issuer, such as real or perceived adverse economic conditions, changes in interest or currency rates, or generally adverse investor sentiment. The value of a holding may also decline due to factors which negatively affect a particular industry or industries, such as labor shortages, increased production costs, or competitive conditions within an industry. The fund may experience heavy redemptions that could cause it to liquidate its assets at inopportune times or at a loss or depressed value, which could cause the value of your investment in the fund to decline.

Interest rate risks The prices of bonds and other fixed income securities typically increase as interest rates fall and prices typically decrease as interest rates rise (bond prices and interest rates usually move in opposite directions). Prices fall because the bonds and notes in the fund's portfolio become less attractive to other investors when securities with higher yields become available. Because the fund's duration typically exceeds 10 years, the fund carries significantly more interest rate risk than many other bond funds, particularly those with much shorter durations. Under current economic conditions, interest rates are near historically low levels. Low or negative interest rates may increase the fund's susceptibility to interest rate risk.

Prepayment risks A fund investing in mortgage-backed securities, certain asset-backed securities, and other debt instruments that have embedded call options can be negatively impacted when interest rates fall because borrowers tend to refinance and prepay principal. Receiving increasing prepayments in a falling interest rate environment causes the average maturity of the portfolio to shorten, reducing its potential for price gains. It also requires the fund to reinvest proceeds at lower interest rates, which reduces the fund's total return and yield, and could result in a loss if bond prices fall below the level that the fund paid for them.

Extension risks A rise in interest rates or lack of refinancing opportunities can cause the fund's average maturity to lengthen unexpectedly due to a drop in expected prepayments of

mortgage-backed securities, asset-backed securities, and callable debt instruments. This would increase the fund's sensitivity to rising rates and its potential for price declines.

Credit risks An issuer or counterparty of an instrument held by the fund may default (fail to make scheduled interest or principal payments), potentially reducing the fund's income and share price. Credit risk is increased when portfolio holdings are downgraded or the perceived financial condition of an issuer or counterparty deteriorates.

Investment-grade (AAA through BBB, or an equivalent rating) holdings should have relatively low risk of encountering financial problems and a relatively high probability of future payments. However, holdings rated BBB (or an equivalent rating) may be more susceptible to adverse economic conditions than other investment-grade securities and may have speculative characteristics. Holdings rated below investment grade (junk bonds or high yield bonds) should be regarded as speculative because their issuers are more susceptible to financial setbacks and recession than more creditworthy issuers. High yield bond issuers include small companies lacking the history or capital to merit investment-grade status, former blue-chip companies downgraded because of financial problems, and firms with heavy debt loads. If the fund invests in holdings whose issuers develop unexpected credit problems, the fund's share price could decline.

The fund's exposure to credit risk is greater than that of a Treasury fund or one with all high-quality bonds, but should be less than that of a fund focusing only on high yield bonds. Higher-quality bond prices are affected primarily by changes in interest rate levels, but high yield bond prices are affected by other factors as well: changes in a company's financial situation, economic forecasts, stock market conditions, technical market analysis, and overall market psychology that can lead to the kind of volatility associated with stocks. High yield bonds are generally less liquid than high-quality bonds, meaning that large transactions can cause substantial price changes.

Liquidity risks The fund may not be able to meet requests to redeem shares issued by the fund without significant dilution of the remaining shareholders' interests in the fund. In addition, the fund may not be able to sell a holding in a timely manner at a desired price. Sectors of the bond market can experience sudden downturns in trading activity. During periods of reduced market liquidity, the spread between the price at which a security can be bought and the price at which it can be sold can widen, and the fund may not be able to sell a holding readily at a price that reflects what the fund believes it should be worth. Securities with lower overall liquidity can also become more difficult to value. Liquidity risk may be the result of, among other things, the reduced number and capacity of traditional broker-dealers to make a market in fixed income securities or the lack of an active trading market. The potential for price movements related to liquidity risk may be magnified by a rising interest rate environment or other circumstances where selling activity from fixed income investors may be higher than normal, potentially causing prices to fall due to increased supply in the market.

Foreign investing risks To the extent the fund holds foreign holdings, it will be subject to special risks, whether the securities are denominated in U.S. dollars or foreign currencies. These risks include potentially adverse local, political, social, and economic conditions

overseas, greater volatility, lower liquidity, and the possibility that foreign currencies will decline against the U.S. dollar, lowering the value of securities denominated in those currencies and possibly the fund's share price. These risks are heightened for the fund's investments in emerging markets, which are more susceptible to governmental interference, less efficient trading markets, and the imposition of local taxes or restrictions on gaining access to sales proceeds for foreign investors.

Derivatives risks While transactions in futures contracts may reduce certain risks, unanticipated changes in interest rates or securities prices may result in a poorer overall performance for the fund than if it had not entered into any futures transactions. To the extent the fund uses futures contracts, it is exposed to additional volatility and potential losses resulting from leverage. Losses (or gains) involving futures contracts can sometimes be substantial—in part because a relatively small price movement in a futures contract may result in an immediate and substantial loss (or gain) for the fund. Because futures contracts, interest rate swaps, and interest rate swap futures are traded on an exchange, there should be no counterparty or default risk, although the fund could experience delays and/or losses associated with the bankruptcy of a broker through which the fund engages in transactions. Futures, swaps, and swap futures may not prove to be successful hedges and the potential loss from the use of futures can exceed the fund's initial investment in such contracts, which could significantly lower the fund's total return.

Efforts to reduce risks Consistent with the fund's objective, the portfolio manager uses various tools to try to reduce risks and increase total return, including:

- Attempting to reduce the impact of a single holding on the fund's net asset value.
- Thorough credit research performed by T. Rowe Price analysts.
- Adjusting the fund's duration to try to reduce the drop in its share price when interest rates rise or to benefit from a rise in bond prices when interest rates fall. (For example, when interest rates rise, the portfolio manager may seek to lower the fund's overall duration in an effort to reduce the adverse impact on the fund's share price.)

In addition to the principal investment strategies and principal risks previously described, the fund may employ other investment strategies and may be subject to other risks, which include the following:

Additional strategies and risks In addition to the fund's normal investments, the fund may employ other strategies that are not considered part of its principal investment strategies. The fund may use futures and swaps in a variety of ways beyond adjusting the fund's duration, such as using credit default swaps to protect the value of certain portfolio holdings or to manage the fund's overall exposure to changes in credit quality. In addition, the fund may invest in other types of securities (such as preferred stocks and convertible securities) and use certain other types of derivatives on a limited basis that are consistent with its investment program.

Derivatives risks A derivative involves risks different from, and possibly greater than, the risks associated with investing directly in the assets on which the derivative is based. Derivatives can be highly volatile, lack liquidity, and be difficult to value. Changes in the value

of a derivative may not properly correlate with changes in the value of the underlying asset, reference rate, or index. The fund could be exposed to significant losses if it is unable to close a derivative position due to the lack of a liquid trading market. Derivatives involve the risk that a counterparty to the derivatives agreement will fail to make required payments or comply with the terms of the agreement. There is also the possibility that limitations or trading restrictions may be imposed by an exchange or government regulation, which could adversely impact the value and liquidity of a derivatives contract subject to such regulation.

Recent regulations have changed the requirements related to the use of certain derivatives. Some of these new regulations have limited the availability of certain derivatives and made their use by funds more costly. It is expected that additional changes to the regulatory framework will occur, but the extent and impact of additional new regulations are not certain at this time.

Cybersecurity risks The fund may be subject to operational and information security risks resulting from breaches in cybersecurity. Cybersecurity breaches may involve unauthorized access to the digital information systems (e.g., through “hacking” or malicious software coding) of the fund or its third-party service providers, but may also result from outside attacks such as denial-of-service attacks. These breaches may, among other things, result in financial losses to the fund and its shareholders, cause the fund to lose proprietary information, disrupt business operations, or result in the unauthorized release of confidential information. Further, cybersecurity breaches involving third-party service providers, trading counterparties, or issuers in which the fund invests could subject the fund to many of the same risks associated with direct breaches.

The Statement of Additional Information contains more detailed information about the fund and its investments, operations, and expenses.

INVESTMENT POLICIES AND PRACTICES

This section provides a more detailed description of the various types of portfolio holdings and investment practices that may be used by the fund to execute its overall investment program. Some of these holdings and investment practices are considered to be principal investment strategies of the fund and have already been described earlier in this prospectus. Any of the following holdings and investment practices that were not already described in Section 1 of this prospectus are not considered part of the fund’s principal investment strategies, but they may be used by the fund to help achieve its investment objective. The fund’s investments may be subject to further restrictions and risks described in the Statement of Additional Information.

Shareholder approval is required to substantively change the fund’s investment objective. Shareholder approval is also required to change certain investment restrictions noted in the following section as “fundamental policies.” Portfolio managers also follow certain “operating policies” that can be changed without shareholder approval.

The fund's holdings in certain kinds of investments cannot exceed maximum percentages as set forth in this prospectus and the Statement of Additional Information. For instance, there are limitations regarding the fund's investments in certain types of derivatives. While these restrictions provide a useful level of detail about the fund's investments, investors should not view them as an accurate gauge of the potential risk of such investments. For example, in a given period, a 5% investment in derivatives could have a significantly greater impact on the fund's share price than its weighting in the portfolio. The net effect of a particular investment depends on its volatility and the size of its overall return in relation to the performance of all of the fund's investments.

Certain investment restrictions, such as a required minimum or maximum investment in a particular type of security, are measured at the time the fund purchases a security. The status, market value, maturity, duration, credit quality, or other characteristics of the fund's securities may change after they are purchased, and this may cause the amount of the fund's assets invested in such securities to exceed the stated maximum restriction or fall below the stated minimum restriction. If any of these changes occur, it would not be considered a violation of the investment restriction and will not require the sale of an investment if it was proper at the time the investment was made (this exception does not apply to the fund's borrowing policy). However, certain changes will require holdings to be sold or purchased by the fund during the time it is above or below the stated percentage restriction in order for the fund to be in compliance with applicable restrictions.

Changes in the fund's holdings, the fund's performance, and the contribution of various investments to the fund's performance are discussed in the shareholder reports.

Portfolio managers have considerable discretion in choosing investment strategies and selecting securities they believe will help achieve the fund's objective.

Types of Portfolio Securities

In seeking to meet its investment objective, the fund may invest in any type of security or instrument (including certain potentially high-risk derivatives described in this section) whose investment characteristics are consistent with its investment program. The following pages describe various types of the fund's holdings and investment management practices, some of which are also described as part of the fund's principal investment strategies.

Fundamental policy The fund will not purchase a security if, as a result, with respect to 75% of its total assets, more than 5% of the fund's total assets would be invested in securities of a single issuer or more than 10% of the outstanding voting securities of the issuer would be held by the fund. These limitations do not apply to the fund's purchases of securities issued or guaranteed by the U.S. government, its agencies, or instrumentalities.

Bonds

A bond is an interest-bearing security. The issuer has a contractual obligation to pay interest at a stated rate on specific dates and to repay principal (the bond's face value) on a specified date. An issuer may have the right to redeem or "call" a bond before maturity, and the investor may

have to reinvest the proceeds at lower market rates. Bonds can be issued by U.S. and foreign governments, states, and municipalities, as well as a wide variety of companies.

A bond's annual interest income, set by its coupon rate, is usually fixed for the life of the bond. Its yield (income as a percent of current price) will fluctuate to reflect changes in interest rate levels. A bond's price usually rises when interest rates fall and vice versa, so its yield generally stays consistent with current market conditions.

Conventional fixed rate bonds offer a coupon rate for a fixed maturity with no adjustment for inflation. Real rate of return bonds also offer a fixed coupon but include ongoing inflation adjustments for the life of the bond.

Certain bonds have floating or variable interest rates that are adjusted periodically based on a particular index. These interest rate adjustments tend to minimize fluctuations in the bonds' principal values. The maturity of certain floating rate securities may be shortened under certain specified conditions.

Bonds may be unsecured (backed by the issuer's general creditworthiness only) or secured (also backed by specified collateral). Bonds include asset- and mortgage-backed securities.

Common and Preferred Stocks

Stocks represent shares of ownership in a company. Generally, preferred stocks have a specified dividend rate and rank after bonds and before common stocks in their claim on income for dividend payments and on assets should the company be liquidated. After other claims are satisfied, common stockholders participate in company profits on a pro-rata basis and profits may be paid out in dividends or reinvested in the company to help it grow. Increases and decreases in earnings are usually reflected in a company's stock price, so common stocks generally have the greatest appreciation and depreciation potential of all corporate securities. Unlike common stock, preferred stock does not ordinarily carry voting rights. While most preferred stocks pay a dividend, the fund may decide to purchase preferred stock where the issuer has suspended, or is in danger of suspending, payment of its dividend.

Convertible Securities and Warrants

The fund may invest in debt instruments or preferred equity securities that are convertible into, or exchangeable for, equity securities at specified times in the future and according to a certain exchange ratio. Convertible bonds are typically callable by the issuer, which could in effect force conversion before the holder would otherwise choose. Traditionally, convertible securities have paid dividends or interest at rates higher than common stocks but lower than nonconvertible securities. They generally participate in the appreciation or depreciation of the underlying stock into which they are convertible, but to a lesser degree than common stock. Some convertible securities combine higher or lower current income with options and other features. Warrants are options to buy, directly from the issuer, a stated number of shares of common stock at a specified price anytime during the life of the warrants (generally, two or more years). Warrants have no voting rights, pay no dividends, and can be highly volatile. In some cases, the redemption value of a warrant could be zero.

Operating policy The fund may invest up to 10% of its total assets in preferred stocks and securities that are convertible into, or which carry warrants for, common stocks or other equity securities. Under normal conditions, the fund does not expect to directly purchase common stocks. Any shares of common stock that are received through a reorganization, restructuring, exercise, exchange, conversion, or similar action will be sold within a reasonable timeframe taking into consideration market conditions and any legal restrictions.

Foreign Securities

The fund may invest in foreign securities. Foreign securities could include non-U.S. dollar-denominated securities traded outside the U.S. and U.S. dollar-denominated securities of foreign issuers traded in the U.S. (such as Yankee bonds). Investing in foreign securities involves special risks that can increase the potential for losses. These include exposure to potentially adverse local, political, social, and economic developments such as war, political instability, hyperinflation, currency devaluations, and overdependence on particular industries; government interference in markets such as nationalization and exchange controls, expropriation of assets, or imposition of punitive taxes; the imposition of international trade and capital barriers and other protectionist or retaliatory measures; potentially lower liquidity and higher volatility; possible problems arising from accounting, disclosure, settlement, and regulatory practices and legal rights that differ from U.S. standards; and the potential for fluctuations in foreign exchange rates to decrease the investment's value (favorable changes can increase its value). These risks are heightened for the fund's investments in emerging markets.

Operating policy There is no limit on the fund's investments in U.S. dollar-denominated debt instruments issued by foreign issuers, foreign branches of U.S. banks, and U.S. branches of foreign banks. The fund may also invest up to 10% of total assets (excluding reserves) in non-U.S. dollar-denominated foreign debt instruments. Subject to the overall limit on the fund's investments in non-U.S. dollar-denominated foreign debt instruments, there is no limit on the amount of foreign investments that may be made in emerging markets.

Mortgage-Backed Securities

The fund may invest in a variety of mortgage-backed securities, including conventional mortgage securities, collateralized mortgage obligations, interest only stripped securities, and principal only stripped securities.

Asset-Backed Securities

An underlying pool of assets, such as credit card or automobile trade receivables or corporate loans or bonds, backs these bonds and provides the interest and principal payments to investors. On occasion, the pool of assets may also include a swap obligation, which is used to change the cash flows on the underlying assets. As an example, a swap may be used to allow floating rate assets to back a fixed rate obligation. Credit quality depends primarily on the quality of the underlying assets, the level of any credit support provided by the structure or by a third-party insurance wrap or a line of credit, and the credit quality of the swap counterparty, if any. The underlying assets (i.e., loans) are sometimes subject to prepayments, which can shorten the security's effective maturity and may lower its return. The value of these securities also may change because of actual or perceived changes in the creditworthiness of the

individual borrowers, the originator, the servicing agent, the financial institution providing the credit support, or the swap counterparty.

Operating policy The fund's investments in mortgage- and asset-backed securities are limited to 5% of its total assets.

Inflation-Linked Securities

Inflation-linked securities are income-generating instruments whose interest and principal payments are adjusted for inflation—a sustained increase in prices of goods and services that erodes the purchasing power of money. Treasury inflation-protected securities are inflation-linked securities issued by the U.S. government. Inflation-linked bonds are also issued by corporations, U.S. government agencies, and foreign governments. The inflation adjustment, which is typically applied monthly to the principal of the bond, follows a designated inflation index, such as the Consumer Price Index. A fixed coupon rate is applied to the inflation-adjusted principal so that as inflation rises, both the principal value and the interest payments increase. This can provide investors with a hedge against inflation, as it helps preserve the purchasing power of your investment. Because of this inflation-adjustment feature, inflation-protected bonds typically have lower yields than conventional fixed rate bonds.

Inflation-protected bonds normally will decline in price when real interest rates rise. (A real interest rate is calculated by subtracting the inflation rate from a nominal interest rate. For example, if a 10-year Treasury note is yielding 5% and inflation expectations for the next 10 years are 2%, the real interest rate is 3%.) If inflation is negative, the principal and income of an inflation-protected bond could decline and result in losses for the fund.

High Yield Bonds

The price and yield of noninvestment-grade (high yield) bonds, including noninvestment-grade emerging market bonds, can be expected to fluctuate more than the price and yield of higher-quality bonds. Because these bonds are rated below BBB (or an equivalent rating) or are in default, they are regarded as predominantly speculative with respect to the issuer's continuing ability to meet principal and interest payments. Successful investment in lower-medium and low-quality bonds involves greater investment risk and is highly dependent on T. Rowe Price's credit analysis. A real or perceived economic downturn or higher interest rates could cause a decline in high yield bond prices by lessening the ability of issuers to make principal and interest payments. These bonds are often thinly traded and can be more difficult to sell and value accurately than higher-quality bonds. Because objective pricing data may be less available, judgment may play a greater role in the valuation process. In addition, the entire high yield bond market can experience sudden and sharp price swings due to a variety of factors, including changes in economic forecasts, stock market activity, large or sustained sales by major investors, a high-profile default, or just a change in the market's psychology.

Operating policy The fund may invest up to 15% of its net assets in below investment-grade securities or bonds.

Derivatives and Leverage

A derivative is a financial instrument whose value is derived from an underlying security, such as a stock or bond, or from a market benchmark, such as an interest rate index. Many types of investments representing a wide range of risks and potential rewards may be considered derivatives, including conventional instruments such as futures and options, as well as other potentially more complex investments such as swaps and structured notes. The use of derivatives can involve leverage. Leverage has the effect of magnifying returns, positively or negatively. The effect on returns will depend on the extent to which an investment is leveraged. For example, an investment of \$1, leveraged at 2 to 1, would have the effect of an investment of \$2. Leverage ratios can be higher or lower with a corresponding effect on returns. The fund may use derivatives in a variety of situations, including for the purposes of accomplishing any or all of the following: to hedge against a decline in principal value, to increase yield, to gain exposure to eligible asset classes or securities with greater efficiency and at a lower cost than is possible through a direct investment, or to adjust portfolio duration or credit risk exposures. In accordance with the Investment Company Act of 1940 and various SEC positions, the fund must “set aside” (often referred to as “asset segregation”) liquid assets, or engage in other measures, to “cover” open positions with respect to certain kinds of derivative instruments.

While the fund’s individual investments may involve leverage, it will not invest in any high-risk, highly leveraged derivative instrument that, at the time of entering into the derivative transaction, is expected to cause the overall price volatility of the portfolio to be meaningfully greater than that of a long-term (over 10-year maturity) investment-grade bond.

Derivatives that may be used include the following instruments, as well as others that combine the risk characteristics and features of futures, options, and swaps:

Futures and Options Futures are often used to establish exposures or manage or hedge risk because they enable the investor to buy or sell an asset in the future at an agreed-upon price. Options may be used to generate additional income, to enhance returns, or as a defensive technique to protect against anticipated declines in the value of an asset. Call options give the investor the right to purchase (when the investor purchases the option), or the obligation to sell (when the investor “writes” or sells the option), an asset at a predetermined price in the future. Put options give the purchaser of the option the right to sell, or the seller (or “writer”) of the option the obligation to buy, an asset at a predetermined price in the future. Futures and options contracts may be bought or sold for any number of reasons, including to manage exposure to changes in interest rates, bond prices, foreign currencies, and credit quality; as an efficient means of increasing or decreasing the fund’s exposure to certain markets; in an effort to enhance income; to improve risk-adjusted returns; to protect the value of portfolio securities; and to serve as a cash management tool. Call or put options may be purchased or sold on securities, futures, financial indexes, and foreign currencies. The fund may choose to continue a futures contract by “rolling over” an expiring futures contract into an identical contract with a later maturity date. This could increase the fund’s transaction costs and portfolio turnover rate.

Futures and options contracts may not always be successful investments or hedges; their prices can be highly volatile; using them could lower the fund's total return; the potential loss from the use of futures can exceed the fund's initial investment in such contracts; and the losses from certain options written by the fund could be unlimited.

Swaps The fund may invest in interest rate, index, total return, credit default, and other types of swap agreements, as well as options on swaps, commonly referred to as "swaptions," and interest rate swap futures, which are instruments that provide a way to obtain swap exposure and the benefits of futures in one contract. All of these agreements are considered derivatives and, in certain cases, high-risk derivatives. Interest rate, index, and total return swaps are two-party contracts under which the fund and a counterparty, such as a broker or dealer, agree to exchange the returns (or differentials in rates of return) earned or realized on particular predetermined investments or indexes. Credit default swaps are agreements where one party (the protection buyer) will make periodic payments to another party (the protection seller) in exchange for protection against specified credit events, such as defaults and bankruptcies related to an issuer or underlying credit instrument. Swap futures are futures contracts on interest rate swaps that enable purchasers to settle in cash at a future date at the price determined by a specific benchmark rate at the end of a fixed period. Swaps, swaptions, and swap futures can be used for a variety of purposes, including to manage the fund's overall exposure to changes in interest or foreign currency exchange rates and credit quality; as an efficient means of adjusting the fund's exposure to certain markets; in an effort to enhance income or total return or protect the value of portfolio securities; to serve as a cash management tool; and to adjust portfolio duration or credit risk exposure.

There are risks in the use of swaps and related instruments. Swaps could result in losses if interest or foreign currency exchange rates or credit quality changes are not correctly anticipated by the fund. Total return swaps could result in losses if the reference index, security, or investments do not perform as anticipated. Credit default swaps can increase the fund's exposure to credit risk and could result in losses if evaluation of the creditworthiness of the counterparty, or of the company or government on which the credit default swap is based, is incorrect. The use of swaps, swaptions, and swap futures may not always be successful. Using them could lower the fund's total return, their prices can be highly volatile, and the potential loss from the use of swaps can exceed the fund's initial investment in such instruments. Also, the other party to a swap agreement could default on its obligations or refuse to cash out the fund's investment at a reasonable price, which could turn an expected gain into a loss. Although there should be minimal counterparty risk associated with investments in interest rate swap futures, the fund could experience delays and/or losses due to the bankruptcy of a swap dealer through which the fund engaged in the transaction.

Currency Derivatives A fund that invests in foreign securities may attempt to hedge its exposure to potentially unfavorable currency changes. The primary means of doing this is through the use of forward currency exchange contracts, which are contracts between two counterparties to exchange one currency for another on a future date at a specified exchange rate. The fund may also use these instruments to create a synthetic bond, which is issued in one currency with the currency component transformed into another currency. However, futures,

swaps, and options on foreign currencies may also be used. In certain circumstances, the fund may use currency derivatives to substitute a different currency for the currency in which the investment is denominated, a strategy known as proxy hedging. If the fund were to engage in any of these foreign currency transactions, it could serve to protect its foreign securities from adverse currency movements relative to the U.S. dollar, although the fund may also use currency derivatives in an effort to gain exposure to a currency expected to appreciate in value versus other currencies. As a result, the fund could be invested in a currency without holding any securities denominated in that currency. Such transactions involve, among other risks, the risk that anticipated currency movements will not occur, which could reduce the fund's total return. There are certain markets, including many emerging markets, where it is not possible to engage in effective foreign currency hedging.

Operating policy The fund will not commit more than 10% of its total assets to any combination of currency derivatives.

When-Issued Securities and Forwards

The fund may purchase securities on a when-issued or delayed delivery basis or may purchase or sell securities on a forward commitment basis. There is no limit on the fund's investments in these securities. The price of these securities is fixed at the time of the commitment to buy, but delivery and payment take place after the customary settlement period for that type of security (often a month or more later). During the interim period, the price and yield of the securities can fluctuate, and typically no interest accrues to the purchaser. At the time of delivery, the market value of the securities may be more or less than the purchase or sale price. To the extent the fund remains fully or almost fully invested (in securities with a remaining maturity of more than one year) at the same time it purchases these securities, there will be greater fluctuations in the fund's net asset value than if the fund did not purchase them.

Investments in Other Investment Companies

The fund may invest in other investment companies, including open-end funds, closed-end funds, and exchange-traded funds.

The fund may purchase the securities of another investment company to temporarily gain exposure to a portion of the market while awaiting the purchase of securities or as an efficient means of gaining exposure to a particular asset class. The fund might also purchase shares of another investment company to gain exposure to the securities in the investment company's portfolio at times when the fund may not be able to buy those securities directly. Any investment in another investment company would be consistent with the fund's objective and investment program.

The risks of owning another investment company are generally similar to the risks of investing directly in the securities in which that investment company invests. However, an investment company may not achieve its investment objective or execute its investment strategy effectively, which may adversely affect the fund's performance. In addition, because closed-end funds and exchange-traded funds trade on a secondary market, their shares may trade at a premium or

discount to the actual net asset value of their portfolio securities and their shares may have greater volatility if an active trading market does not exist.

As a shareholder of another investment company, the fund must pay its pro-rata share of that investment company's fees and expenses. The fund's investments in non-T. Rowe Price investment companies are subject to the limits that apply to investments in other funds under the Investment Company Act of 1940 or under any applicable exemptive order.

The fund may also invest in certain other T. Rowe Price Funds as a means of gaining efficient and cost-effective exposure to certain asset classes, provided the investment is consistent with the fund's investment program and policies.

Investments in other investment companies could allow the fund to obtain the benefits of a more diversified portfolio than might otherwise be available through direct investments in a particular asset class, and will subject the fund to the risks associated with the particular asset class or asset classes in which an underlying fund invests. Examples of asset classes in which other mutual funds (including T. Rowe Price Funds) focus their investments include high yield bonds, inflation-linked securities, floating rate loans, international bonds, emerging market bonds, stocks of companies involved in activities related to real assets, stocks of companies that focus on a particular industry or sector, and emerging market stocks. If the fund invests in another T. Rowe Price Fund, the management fee paid by the fund will be reduced to ensure that the fund does not incur duplicate management fees as a result of its investment.

Illiquid Investments

Some of the fund's holdings may be considered illiquid because they are subject to legal or contractual restrictions on resale or because the fund cannot reasonably expect the investment to be sold or disposed of in current market conditions within seven days without the sale or disposition significantly changing the market value of the investment. The determination of liquidity involves a variety of factors. Illiquid investments may include private placements that are sold directly to a small number of investors, usually institutions. Unlike public offerings, such securities are not registered with the SEC. Although certain of these securities may be readily sold (for example, pursuant to Rule 144A under the Securities Act of 1933) and therefore deemed liquid, others may have resale restrictions and be considered illiquid. The sale of illiquid investments may involve substantial delays and additional costs, and the fund may only be able to sell such investments at prices substantially lower than what it believes they are worth. In addition, the fund's investments in illiquid investments may reduce the returns of the fund because it may be unable to sell such investments at an advantageous time, which could prevent the fund from taking advantage of other investment opportunities.

Operating policy The fund may not acquire an illiquid investment if, immediately after the acquisition, the fund would have invested more than 15% of its net assets in illiquid investments.

Types of Investment Management Practices

Reserve Position

A certain portion of the fund's assets may be held in reserves. The fund's reserve positions will primarily consist of: (1) shares of a T. Rowe Price internal money market fund or short-term bond fund (which do not charge any management fees); (2) short-term, high-quality U.S. and foreign dollar-denominated money market securities, including repurchase agreements; and (3) U.S. dollar or non-U.S. dollar currencies. In order to respond to adverse market, economic, political, or other conditions, the fund may assume a temporary defensive position that is inconsistent with its principal investment objective and/or strategies and may invest, without limitation, in reserves. If the fund has significant holdings in reserves, it could compromise its ability to achieve its objective. The reserve position provides flexibility in meeting redemptions, paying expenses, and managing cash flows into the fund and can serve as a short-term defense during periods of unusual market volatility. Non-U.S. dollar reserves are subject to currency risk.

Borrowing Money and Transferring Assets

The fund may borrow from banks, other persons, and other T. Rowe Price Funds for temporary or emergency purposes, to facilitate redemption requests, or for other purposes consistent with the fund's policies as set forth in this prospectus and the Statement of Additional Information. Such borrowings may be collateralized with the fund's assets, subject to certain restrictions.

Fundamental policy Borrowings may not exceed 33 $\frac{1}{3}$ % of the fund's total assets. This limitation includes any borrowings for temporary or emergency purposes, applies at the time of the transaction, and continues to the extent required by the Investment Company Act of 1940.

Operating policy The fund will not transfer portfolio securities as collateral except as necessary in connection with permissible borrowings or investments, and then such transfers may not exceed 33 $\frac{1}{3}$ % of its total assets. The fund will not purchase additional securities when its borrowings exceed 5% of its total assets.

Meeting Redemption Requests

We expect that the fund will hold cash or cash equivalents to meet redemption requests. The fund may also use the proceeds from the sale of portfolio securities to meet redemption requests if consistent with the management of the fund. These redemption methods will be used regularly and may also be used in deteriorating or stressed market conditions. The fund reserves the right to pay redemption proceeds with securities from the fund's portfolio rather than in cash (redemptions in-kind), as described under "Large Redemptions." Redemptions in-kind are typically used to meet redemption requests that represent a large percentage of the fund's net assets in order to minimize the effect of large redemptions on the fund and its remaining shareholders. In general, any redemptions in-kind will represent a pro-rata distribution of the fund's securities, subject to certain limited exceptions. Redemptions in-kind may be used regularly in circumstances as described above and may also be used in stressed market conditions.

The fund, along with other T. Rowe Price Funds, is a party to an interfund lending exemptive order received from the SEC that permits the T. Rowe Price Funds to borrow money from and/or lend money to other T. Rowe Price Funds to help the funds meet short-term redemptions and liquidity needs.

During periods of deteriorating or stressed market conditions, when an increased portion of the fund's portfolio may be composed of holdings with reduced liquidity or lengthy settlement periods, or during extraordinary or emergency circumstances, the fund may be more likely to pay redemption proceeds with cash obtained through interfund lending or short-term borrowing arrangements (if available), or by redeeming a large redemption request in-kind.

Lending of Portfolio Securities

The fund may lend its securities to broker-dealers, other institutions, or other persons to earn additional income. Risks include the potential insolvency of the broker-dealer or other borrower that could result in delays in recovering securities and capital losses. Additionally, losses could result from the reinvestment of collateral received on loaned securities in investments that decline in value, default, or do not perform as well as expected. Cash collateral from securities lending is invested in the T. Rowe Price Short-Term Fund.

Fundamental policy The value of loaned securities may not exceed 33¹/₃% of the fund's total assets.

Credit Quality Considerations

The credit quality of many fund holdings is evaluated by rating agencies such as Moody's Investors Service, Inc. (Moody's), S&P Global Ratings (S&P), and Fitch Ratings, Inc. (Fitch). Credit quality refers to the issuer's ability and willingness to meet all required interest and principal payments. The highest ratings are assigned to issuers perceived to have the lowest credit risks. T. Rowe Price credit research analysts also evaluate the fund's holdings, including those rated by outside agencies. Other things being equal, bonds and other debt obligations with lower ratings typically have higher yields due to greater credit risk.

Credit quality ratings are not guarantees. They are estimates of an issuer's creditworthiness and ability to make interest and principal payments as they come due. Ratings can change at any time due to actual or perceived changes in an issuer's creditworthiness or financial fundamentals.

Bonds rated Baa and above by Moody's, and BBB and above by S&P and Fitch, are considered to be "investment grade." Bonds that are rated below these categories are considered to have greater credit risk and are referred to as "below investment grade" or "noninvestment grade." Bonds rated below investment grade range from speculative to highly speculative with respect to the issuer's ability or willingness to pay interest and repay principal. The following table summarizes the rating scales and associated credit risk assigned by the major rating agencies. Within these categories, the rating may be modified with a symbol (such as 1, 2, and 3, or a plus or minus) to indicate whether the bond is ranked in the higher or lower end of its rating category. T. Rowe Price generally relies upon its own credit analysis when selecting investments.

Ratings of Debt Instruments

Moody's	S&P	Fitch	Description of Category
Aaa	AAA	AAA	Lowest level of credit risk with extremely strong capacity to meet financial commitments
Aa	AA	AA	Very low credit risk with very strong capacity to meet financial commitments
A	A	A	Low credit risk with strong capacity to meet financial commitments
Baa	BBB	BBB	Moderate credit risk with adequate capacity to meet financial commitments
Ba	BB	BB	Subject to substantial credit risk, and adverse conditions could lead to inadequate capacity to meet financial commitments
B	B	B	Subject to high credit risk, and adverse conditions will likely impair capacity to meet financial commitments
Caa	CCC	CCC	Subject to very high credit risk and dependent upon favorable conditions to meet financial commitments
Ca	CC	CC	Highly vulnerable to nonpayment and likely in, or very near, default with some prospect of recovery of principal and interest
C	C	C	Typically in default with little prospect for recovery of principal and interest
—	D	D	In default

Portfolio Turnover

Turnover is an indication of frequency of trading. Each time the fund purchases or sells a security, it incurs a cost. This cost is reflected in the fund's net asset value but not in its operating expenses. The higher the turnover rate, the higher the transaction costs and the greater the impact on the fund's total return. Higher turnover can also increase the possibility of taxable capital gain distributions. The fund's portfolio turnover rates are shown in the Financial Highlights table.

FINANCIAL HIGHLIGHTS

The Financial Highlights table, which provides information about the fund's financial history, is based on a single share outstanding throughout the periods shown. The table is part of the fund's financial statements, which are included in its annual report and are incorporated by reference into the Statement of Additional Information (available upon request). The financial statements in the annual report were audited by the fund's independent registered public accounting firm, PricewaterhouseCoopers LLP.

FINANCIAL HIGHLIGHTS

For a share outstanding throughout each period

	Year				
	Ended				
	5/31/19	5/31/18	5/31/17	5/31/16	5/31/15
NET ASSET VALUE					
Beginning of period	\$ 10.06	\$ 10.52	\$ 10.44	\$ 10.33	\$ 10.32

⁽¹⁾ Includes the impact of expense-related arrangements with Price Associates.

⁽²⁾ Per share amounts calculated using average shares outstanding method.

⁽³⁾ The amount presented is inconsistent with the fund's aggregate gains and losses because of the timing of sales and redemptions of fund shares in relation to fluctuating market values for the investment portfolio.

⁽⁴⁾ Total return reflects the rate that an investor would have earned on an investment in the fund during each period, assuming reinvestment of all distributions and payment of no redemption or account fees, if applicable.

DISCLOSURE OF FUND PORTFOLIO INFORMATION

The T. Rowe Price Funds' complete portfolio holdings as of their fiscal year-ends are disclosed in their annual shareholder reports and their complete portfolio holdings as of their fiscal mid-point are disclosed in their semiannual shareholder reports. The annual and semiannual shareholder reports are filed with the SEC and sent to the funds' shareholders within 60 days of the period covered. The shareholder reports are publicly available immediately upon filing with the SEC. Beginning with reporting periods ending on or after March 1, 2019, the T. Rowe Price Funds (except the money market funds) also disclose their complete portfolio holdings as of their first and third fiscal quarter-ends on Form N-PORT, along with other fund information. Form N-PORT is filed with the SEC each quarter, and the fund's complete portfolio holdings as of its first and third fiscal quarter-ends (as of the third month of the fund's fiscal quarter for reporting periods on or after September 30, 2019) are made publicly available within 60 days after the end of each quarter. Prior to March 1, 2019, the T. Rowe Price Funds (including the

money market funds) disclosed their complete portfolio holdings for their first and third fiscal quarter-ends on Form N-Q, which was filed with the SEC within 60 days of the period covered and made publicly available immediately upon filing with the SEC. Neither Form N-PORT nor Form N-Q is sent to the funds' shareholders. Under certain conditions, the shareholder reports, Form N-PORT, and Form N-Q may include up to 5% of a fund's holdings under the caption "Miscellaneous Securities" without identifying the specific security or issuer. Generally, a holding would not be individually identified if it is determined that its disclosure could be harmful to the fund or its shareholders. A holding will not be excluded for these purposes from a fund's SEC filings for more than one year. The money market funds also file detailed month-end portfolio holdings information on Form N-MFP with the SEC each month. Form N-MFP is publicly available immediately upon filing with the SEC.

In addition, most T. Rowe Price Funds disclose their calendar quarter-end portfolio holdings on **troweprice.com** 15 calendar days after each quarter. At the discretion of the investment adviser, these holdings reports may exclude the issuer name and other information relating to a holding in order to protect the fund's interests and prevent harm to the fund or its shareholders. Private placements and other restricted securities may not be individually identified in the calendar quarter-end holdings on **troweprice.com**, but would be disclosed in any SEC filings. Money market funds also disclose on **troweprice.com** their month-end complete portfolio holdings five business days after each month-end and historical information about the fund's investments for the previous six months, as of the last business day of the preceding month. This information includes, among other things, the percentage of the fund's investments in daily and weekly liquid assets, the fund's weighted average maturity and weighted average life, the fund's market-based net asset value, and the fund's net inflows and outflows. The calendar quarter-end portfolio holdings will remain on the website for one year and the month-end money market fund portfolio holdings will remain on the website for six months. In addition, most T. Rowe Price Funds disclose their 10 largest holdings, along with the percentage of the relevant fund's total assets that each of the 10 holdings represents, on **troweprice.com** on the seventh business day after each month-end. These holdings are listed in numerical order based on such percentages of the fund's assets. Each monthly top 10 list will remain on the website for six months. A description of T. Rowe Price's policies and procedures with respect to the disclosure of portfolio information is available in the Statement of Additional Information.

The following policies and procedures apply to the Institutional Funds within the T. Rowe Price Funds.

INVESTING WITH T. ROWE PRICE

This section of the prospectus describes the policies and procedures that generally apply to investments in the T. Rowe Price Institutional Funds (except for the T. Rowe Price Institutional Cash Reserves Fund). The T. Rowe Price Institutional Funds may be purchased directly from T. Rowe Price or through a financial intermediary, such as a bank, broker, retirement plan recordkeeper, or financial advisor.

AVAILABLE SHARE CLASSES

Most of the T. Rowe Price Institutional Funds are available only in a single share class (referred to as the “Institutional Class”). However, the Institutional Floating Rate Fund is also offered in an F Class. Each class of a fund’s shares represents an interest in the same fund with the same investment program and investment policies. While the Institutional Class may be held directly with T. Rowe Price or through a financial intermediary, the F Class is designed to be purchased only through financial advisors and certain financial intermediaries and has a different cost structure due to a shareholder servicing arrangement that applies only to that class.

This section generally describes investing only in the T. Rowe Price Institutional Funds, other than the T. Rowe Price Institutional Cash Reserves Fund, which has unique policies relating to its operation as an institutional money market fund. This section does not describe the policies that apply to other T. Rowe Price Funds. Policies for other T. Rowe Price Funds are described in their respective prospectuses, and all types of funds and available share classes for the T. Rowe Price Funds are described more fully in the funds’ Statement of Additional Information.

Institutional Class

The Institutional Class may be purchased directly through T. Rowe Price or through a financial intermediary. The Institutional Class does not make any payments to financial intermediaries for distribution of the fund’s shares (commonly referred to as 12b-1 fee payments) and does not make any payments to financial intermediaries for administrative services they provide (commonly referred to as administrative fee payments). However, you may incur brokerage commissions and other charges when buying or selling Institutional Class shares.

The Institutional Class is designed to be sold only to institutional investors, which include, but are not limited to: corporations, endowments and foundations, charitable trusts, investment companies and other pooled vehicles, defined benefit and defined contribution retirement

plans, broker-dealers, registered investment advisers, banks and bank trust programs, and Section 529 college savings plans. The Institutional Class generally requires a \$1 million initial investment minimum, although the minimum may be waived for retirement plans, financial intermediaries maintaining omnibus accounts, and certain other accounts.

F Class

The F Class must be purchased through a financial intermediary. The F Class does not make any 12b-1 fee payments to financial intermediaries but may make administrative fee payments at an annual rate of up to 0.15% of the class' average daily net assets.

The F Class is designed to be sold only through financial advisors and certain financial intermediaries, including brokers, banks, insurance companies, retirement plan recordkeepers, and other financial intermediaries. F Class shares are generally not available to financial intermediaries that would make the fund available to their customers through a mutual fund "supermarket" platform. There is a \$2,500 minimum initial investment requirement, but the minimum is waived for certain types of accounts.

PAYMENTS TO FINANCIAL INTERMEDIARIES

Administrative Fee Payments (F Class)

Certain financial intermediaries perform recordkeeping and administrative services for their clients that would otherwise be performed by the funds' transfer agent. The F Class may make administrative fee payments to retirement plan recordkeepers, broker-dealers, and other financial intermediaries (at an annual rate of up to 0.15% of the class' average daily net assets) for transfer agency, recordkeeping, and other administrative services they provide on behalf of the funds. These administrative services may include maintaining account records for each customer; transmitting purchase and redemption orders; delivering shareholder confirmations, statements, and tax forms; and providing support to respond to customers' questions regarding their accounts. These separate administrative fee payments are reflected in the "Other expenses" line that appears in the fee table in Section 1 with respect to the fund's F Class.

Some broker-dealers or other financial intermediaries that are eligible to purchase F Class shares of T. Rowe Price Institutional Funds may also be eligible to purchase the Institutional Class. The Institutional Class shares require a much higher initial investment but have lower expenses than F Class shares because the Institutional Class does not participate in the administrative fee payment program. The payment of the administrative fee by the F Class creates a potential conflict of interest by influencing the broker-dealer or other financial intermediary to purchase F Class shares instead of Institutional Class shares. If this happens, you will incur higher expenses than if your financial intermediary had purchased Institutional Class shares on your behalf (assuming your financial intermediary would qualify to purchase Institutional Class shares). You should ask your salesperson for more information regarding the eligibility of your financial intermediary to purchase Institutional Class shares.

Additional Payments to Financial Intermediaries

In addition to the AFP payments made by the F Class of the Institutional Floating Rate Fund, T. Rowe Price or the fund's distributor will, at their own expense, provide compensation to certain financial intermediaries that have sold shares of or provide shareholder or other services to the T. Rowe Price Funds, commonly referred to as revenue sharing. These payments may be in the form of asset-based, transaction-based, or flat payments. These payments are used to compensate third parties for distribution and shareholder servicing activities, including sub-accounting, sub-transfer agency, or other services. Some of these payments may include expense reimbursements and meeting and marketing support payments (out of T. Rowe Price's or the fund's distributor's own resources and not as an expense of the funds) to financial intermediaries, such as broker-dealers, registered investment advisers, banks, insurance companies, and retirement plan recordkeepers, in connection with the sale, distribution, marketing, and/or servicing of the T. Rowe Price Funds. The Statement of Additional Information provides more information about these payment arrangements.

The receipt of, or the prospect of receiving, these payments and expense reimbursements from T. Rowe Price or the fund's distributor may influence intermediaries, plan sponsors, and other third parties to offer or recommend T. Rowe Price Funds over other investment options for which an intermediary does not receive additional compensation (or receives lower levels of additional compensation). In addition, financial intermediaries that receive these payments and/or expense reimbursements may elevate the prominence of the T. Rowe Price Funds by, for example, placing the T. Rowe Price Funds on a list of preferred or recommended funds and/or provide preferential or enhanced opportunities to promote the T. Rowe Price Funds in various ways. Since these additional payments are not paid by a fund directly, these arrangements do not increase fund expenses and will not change the price that an investor pays for shares of the T. Rowe Price Funds or the amount that is invested in a T. Rowe Price Fund on behalf of an investor. You may ask your financial intermediary for more information about any payments they receive from T. Rowe Price or the fund's distributor.

POLICIES FOR OPENING AN ACCOUNT

If you are opening an account through an employer-sponsored retirement plan or other financial intermediary, you should contact the retirement plan or financial intermediary for information regarding its policies on opening an account, including the policies relating to purchasing, exchanging, and redeeming shares, and the applicable initial and subsequent investment minimums.

Tax Identification Number

Institutional investors must provide T. Rowe Price with a valid taxpayer identification number (and valid Social Security numbers for individuals opening the account on behalf of the institution) on a signed new account form or Form W-9. Otherwise, federal law requires the funds to withhold a percentage of dividends, capital gain distributions, and redemptions and

may subject the investor to an Internal Revenue Service fine. If this information is not received within 60 days after the account is established, the account may be redeemed at the fund's then-current net asset value. Financial intermediaries opening an account in a fund must also enter into a separate agreement with the fund or its agent.

Important Information Required to Open a New Account

Pursuant to federal law, all financial institutions must obtain, verify, and record information that identifies each person or entity that opens an account. This information is needed not only for the account owner and any other person who opens the account, but also for any person who has authority to act on behalf of the account. When you open an account for an entity, you will be required to provide the entity's name, U.S. street address (post office boxes are not acceptable), and taxpayer identification number, as well as your name, U.S. street address (post office boxes are not acceptable), date of birth, and Social Security number as the person opening the account on behalf of the entity. Corporate and other institutional accounts require documents showing the existence of the entity (such as articles of incorporation or partnership agreements) to open an account. Certain other fiduciary accounts (such as trusts or power of attorney arrangements) require documentation, which may include an original or certified copy of the trust agreement or power of attorney, to open an account.

T. Rowe Price will use this information to verify the identity of the entity and person opening the account. An account cannot be opened until all of this information is received. If the identity of the entity or person opening the account on behalf of the entity cannot be verified, T. Rowe Price is authorized to take any action permitted by law. (See "Rights Reserved by the Funds" later in this section.)

Call Financial Institution Services at 1-800-638-8790 for more information on these requirements.

The Institutional Funds are generally available only to institutional investors with a U.S. address. T. Rowe Price will generally not authorize the transfer of ownership of an account in an Institutional Fund for an institutional investor to an account for a noninstitutional investor. Shares held directly with T. Rowe Price by noninstitutional investors are subject to involuntary redemption at any time, which could result in a taxable gain to the investor.

Opening an Account

Call Financial Institution Services at 1-800-638-8790 for an account number and wire transfer instructions. All initial purchases are typically made by bank wire, but checks or other forms of payment may be accepted in certain cases. In order to obtain an account number, you must supply the name, taxpayer identification number, and business street address for the account. Complete a new account form and mail it, along with proper documentation identifying your firm and any other necessary documentation, to one of the following addresses:

via U.S. mail

T. Rowe Price Financial Institution Services
P.O. Box 17300
Baltimore, MD 21297-1603

via private carriers/overnight services

T. Rowe Price Financial Institution Services
Mail Code: OM-4232
4515 Painters Mill Road
Owings Mills, MD 21117-4842

Note: Although the purchase will be made, services may not be established and an Internal Revenue Service penalty withholding may occur until we receive a signed new account form.

PRICING OF SHARES AND TRANSACTIONS

How and When Shares Are Priced

The trade date for your transaction request depends on the day and time that T. Rowe Price receives your request and will normally be executed using the next share price calculated after your order is received in correct form by T. Rowe Price or its agent (or by your financial intermediary if it has the authority to accept transaction orders on behalf of the fund). The share price, also called the net asset value, for each share class of a fund is calculated at the close of trading on the New York Stock Exchange (NYSE), which is normally 4 p.m. ET, each day that the NYSE is open for business. Net asset values are not calculated for the funds on days when the NYSE is scheduled to be closed for trading (for example, weekends and certain U.S. national holidays). If the NYSE is unexpectedly closed due to weather or other extenuating circumstances on a day it would typically be open for business, or if the NYSE has an unscheduled early closing on a day it has opened for business, the funds reserve the right to treat such day as a business day and accept purchase and redemption orders and calculate their share price as of the normally scheduled close of regular trading on the NYSE for that day.

To calculate the net asset value, a fund's assets are valued and totaled, liabilities are subtracted, and each class' proportionate share of the balance, called net assets, is divided by the number of shares outstanding of that class. Market values are used to price portfolio holdings for which market quotations are readily available. Market values generally reflect the prices at which securities actually trade or represent prices that have been adjusted based on evaluations and information provided by the fund's pricing services. Investments in other mutual funds are valued at the closing net asset value per share of the mutual fund on the day of valuation. If a market value for a portfolio holding is not available or normal valuation procedures are deemed to be inappropriate, the fund will make a good faith effort to assign a fair value to the holding by taking into account various factors and methodologies that have been approved by the fund's Board. This value may differ from the value the fund receives upon sale of the securities. Amortized cost is used to price securities held by money market funds and certain short-term debt securities held by a fund.

The funds use various pricing services to provide closing market prices, as well as information used to adjust those prices and to value most fixed income securities. A fund cannot predict how often it will use closing prices and how often it will adjust those prices. As a means of

evaluating its fair value process, the fund routinely compares closing market prices, the next day's opening prices in the same markets, and adjusted prices.

Non-U.S. equity securities are valued on the basis of their most recent closing market prices at 4 p.m. ET, except under the following circumstances. Most foreign markets close before 4 p.m. ET. For example, the most recent closing prices for securities traded in certain Asian markets may be as much as 15 hours old at 4 p.m. ET. If a fund determines that developments between the close of a foreign market and the close of the NYSE will affect the value of some or all of the fund's securities, the fund will adjust the previous closing prices to reflect what it believes to be the fair value of the securities as of 4 p.m. ET. In deciding whether to make these adjustments, the fund reviews a variety of factors, including developments in foreign markets, the performance of U.S. securities markets, and the performance of instruments trading in U.S. markets that represent foreign securities and baskets of foreign securities.

A fund may also fair value certain securities or a group of securities in other situations—for example, when a particular foreign market is closed but the fund is open. For a fund that has investments in securities that are primarily listed on foreign exchanges that trade on weekends or other days when the fund does not price its shares, the fund's net asset value may change on days when shareholders will not be able to purchase or redeem the fund's shares. If an event occurs that affects the value of a security after the close of the market, such as a default of a commercial paper issuer or a significant move in short-term interest rates, a fund may make a price adjustment depending on the nature and significance of the event. The funds also evaluate a variety of factors when assigning fair values to private placements and other restricted securities. Other mutual funds may adjust the prices of their securities by different amounts or assign different fair values than the fair value that the fund assigns to the same security.

How the Trade Date Is Determined

If you invest directly with T. Rowe Price and your request to purchase, sell, or exchange shares is received by T. Rowe Price or its agent in correct form by the close of the NYSE (normally 4 p.m. ET), your transaction will be priced at that business day's net asset value. If your request is received by T. Rowe Price or its agent in correct form after the close of the NYSE, your transaction will be priced at the next business day's net asset value unless the fund has an agreement with your financial intermediary for orders to be priced at the net asset value next computed after receipt by the financial intermediary.

The funds have authorized certain financial intermediaries or their designees to accept orders to buy or sell fund shares on their behalf. When authorized financial intermediaries receive an order in correct form, the order is considered as being placed with the fund and shares will be bought or sold at the net asset value next calculated after the order is received by the authorized financial intermediary. The financial intermediary must transmit the order to T. Rowe Price and pay for such shares in accordance with the agreement with T. Rowe Price, or the order may be canceled and the financial intermediary could be held liable for the losses. If the fund does not have such an agreement in place with your financial intermediary, T. Rowe Price or its agent must receive the request in correct form from your financial intermediary by the close of

the NYSE in order for your transaction to be priced at that business day's net asset value. Contact your financial intermediary for trade deadlines and the applicable policies for purchasing, selling, or exchanging your shares, as well as initial and subsequent investment minimums. The financial intermediary may charge a fee, such as transaction fees or brokerage commissions, for its services.

Note: There may be times when you are unable to contact us or access your account due to extreme market activity or other circumstances. Should this occur, your order must still be placed and received in correct form by T. Rowe Price (or by the financial intermediary in accordance with its agreement with T. Rowe Price) prior to the time the NYSE closes to be priced at that business day's net asset value. The time at which transactions and shares are priced and the time until which orders are accepted may be changed in case of an emergency or if the NYSE closes at a time other than 4 p.m. ET. The funds reserve the right to not treat an unscheduled intraday disruption or closure in NYSE trading as a closure of the NYSE and still accept transactions and calculate their net asset value as of 4 p.m. ET.

Transaction Confirmations

T. Rowe Price sends immediate confirmations for most of your fund transactions. However, certain transactions, such as dividend reinvestments, do not receive an immediate transaction confirmation but are reported on your account statement. Please review transaction confirmations and account statements as soon as you receive them and promptly report any discrepancies to Financial Institution Services.

Preventing Unauthorized Transactions

The T. Rowe Price Funds and their agents use reasonably designed procedures to verify that telephone, electronic, and other instructions are genuine. These procedures include, among other things, recording telephone calls; requiring personalized security codes or other information online and certain identifying information for telephone calls; requiring Medallion signature guarantees for certain transactions and account changes; and promptly sending confirmations of transactions and address changes. For transactions conducted online, we recommend the use of a secure Internet browser.

T. Rowe Price Account Protection Program Shareholders who invest in the T. Rowe Price Funds directly are eligible for the Account Protection Program. The Account Protection Program restores eligible losses due to unauthorized or fraudulent activity, provided that you follow all security best practices when you access and maintain your account(s). T. Rowe Price reserves the right to modify or withdraw the Account Protection Program at any time. The Account Protection Program security best practices and additional information may be accessed online at <https://www.troweprice.com/personal-investing/help/policies-and-security/account-protection-program.html>.

If our verification procedures are followed, and the losses are not eligible to be restored under the Account Protection Program, the funds and their agents are not liable for any losses that may occur from acting on unauthorized instructions.

If you suspect any unauthorized account activity, notice errors or discrepancies in your T. Rowe Price account, or are not receiving your T. Rowe Price account statements, please contact T. Rowe Price immediately. Telephone conversations are recorded.

Purchasing Shares

Purchases may be initiated through the National Securities Clearing Corporation or by calling Financial Institution Services. All initial and subsequent investments are typically made by bank wire, although checks or other forms of payment may be accepted in certain cases. There is no assurance that the share price for a purchase will be the same day a wire was initiated.

The funds generally do not accept orders that request a particular day or price for a transaction or any other special conditions. However, when authorized by the fund, certain institutions, financial intermediaries, or retirement plans purchasing fund shares directly with T. Rowe Price may place a purchase order unaccompanied by payment. Payment for these shares must be received by the time designated by the fund (not to exceed the period established for settlement under applicable regulations). If payment is not received by this time, the order may be canceled. The institution, financial intermediary, or retirement plan is responsible for any costs or losses incurred by the fund or T. Rowe Price if payment is delayed or not received.

U.S. Dollars All purchases must be paid for in U.S. dollars; checks must be drawn on U.S. banks and should be payable to the T. Rowe Price Funds.

Nonpayment Purchases of a fund may be canceled if payment is not received in a timely manner, and the shareholder may be responsible for any losses or expenses incurred by the fund or its transfer agent. The funds and their agents have the right to reject or cancel any purchase, exchange, or redemption due to nonpayment.

Investment Minimums

The Institutional Class generally requires a \$1 million minimum initial investment and the F Class generally requires a \$2,500 minimum initial investment, although the minimums may be waived for financial intermediaries, retirement plans, and certain other institutional investors. In addition, we request that you give us at least three business days' notice (seven business days' notice for the Institutional Floating Rate Fund) for any purchase of \$5 million or more. There is generally no minimum required for additional purchases.

You should check with your financial advisor, retirement plan, or financial intermediary to determine what minimum applies to your initial and additional investments.

Exchanging and Redeeming Shares

Exchanges You can move money from one account to an existing, identically registered account or open a new identically registered account. An exchange from one fund to another will be reported to the Internal Revenue Service as a sale for tax purposes.

Redemptions Redemptions are typically initiated through the National Securities Clearing Corporation or by calling Financial Institution Services. Please note that certain redemption requests initiated through the National Securities Clearing Corporation may be rejected, and in

such instances, the transaction must be placed by contacting a Financial Institution Services representative.

If for some reason we cannot accept your request to exchange or redeem shares, we will attempt to contact you.

If you request to redeem a specific dollar amount and the market value of your account is less than the amount of your request and we are unable to contact you, your redemption will not be processed and you will need to submit a new redemption request in correct form.

Receiving Redemption Proceeds Unless otherwise indicated, redemption proceeds will be sent via bank wire to the designated bank on file for the account. If a request is received in correct form by T. Rowe Price or its agent on a business day prior to the close of the NYSE, proceeds are usually sent on the next business day. Proceeds sent by bank wire are usually credited to an account the next business day after the sale. Redemption proceeds can be mailed to the account address by check if specifically requested. Normally, the fund transmits proceeds to financial intermediaries for redemption orders received in correct form on either the next business day or second business day after receipt of the order, depending on the arrangement with the financial intermediary. You must contact your financial intermediary about procedures for receiving your redemption proceeds.

Large Redemptions Large redemptions (for example, \$250,000 or more) can adversely affect a portfolio manager's ability to implement a fund's investment strategy by causing the premature sale of securities that would otherwise be held longer. Therefore, the fund reserves the right (without prior notice) to redeem in kind. In general, any redemptions in-kind will represent a pro-rata distribution of a fund's securities, subject to certain limited exceptions. The redeeming shareholder will be responsible for disposing of the securities, and the shareholder will be subject to the risks that the value of the securities could decline prior to their sale, the securities could be difficult to sell, and brokerage fees could be incurred. If you continue to hold the securities, you may be subject to any ownership restrictions imposed by the issuers. For example, real estate investment trusts often impose ownership restrictions on their equity securities.

Delays in Sending Redemption Proceeds

The T. Rowe Price Funds typically expect that it will take one to two days following the receipt of a redemption request that is in correct form to send redemption proceeds, regardless of the method the fund uses to make such payment (for example, check, wire, or Automated Clearing House transfer). Checks are typically mailed on the business day after the redemption, proceeds sent by wire are typically credited to your financial institution the business day after the redemption, and proceeds sent by Automated Clearing House are typically credited to your financial institution on the second business day after the redemption. However, under certain circumstances, and when deemed to be in a fund's best interests, proceeds may not be sent for up to seven calendar days after receipt of a valid redemption order (for example, during periods of deteriorating or stressed market conditions or during extraordinary or emergency circumstances).

In addition, if shares are sold that were just purchased and paid for by check or Automated Clearing House transfer, the fund will process your redemption but will generally delay sending the proceeds for up to seven calendar days to allow the check or Automated Clearing House transfer to clear. If, during the clearing period, we receive a check drawn against your newly purchased shares, it will be returned and marked “uncollected.” (The seven-day hold does not apply to purchases paid for by bank wire or automatic purchases through payroll deduction.)

The Board of a retail or institutional money market fund may temporarily suspend redemptions from the fund for up to 10 business days during any 90-day period (i.e., a “redemption gate”) and elect to temporarily suspend redemptions for up to 10 business days in a 90-day period if the fund’s weekly liquid assets fall below 30% of its total assets and the fund’s Board determines that imposing a redemption gate is in the fund’s best interests. In addition, under certain limited circumstances, the Board of a retail or institutional money market fund may elect to permanently suspend redemptions in order to facilitate an orderly liquidation of the fund (subject to any additional liquidation requirements).

GENERAL POLICIES AND REQUIREMENTS

You may initiate transactions involving the Institutional Funds by telephone, by mail, or through the National Securities Clearing Corporation. The T. Rowe Price Funds and their agents use reasonable procedures to verify the identity of the person contacting T. Rowe Price and to ensure that the person is authorized to act on behalf of the account. If these procedures are followed, the funds and their agents are not liable for any losses that may occur from acting on unauthorized instructions. Please review the transaction confirmation carefully, and contact Financial Institution Services immediately about any transaction you believe to be unauthorized. Telephone conversations are recorded.

To place a transaction or make any inquiries regarding the T. Rowe Price Institutional Funds, please call Financial Institution Services at 1-800-638-8790. To mail any information to T. Rowe Price regarding the T. Rowe Price Institutional Funds, please use the following addresses:

via U.S. mail

T. Rowe Price Financial Institution Services
P.O. Box 17300
Baltimore, MD 21297-1603

via private carriers/overnight services

T. Rowe Price Financial Institution Services
Mail Code: OM-4232
4515 Painters Mill Road
Owings Mills, MD 21117-4842

Note: If sending a check for a purchase, your transaction will receive the share price for the business day that the check is received by T. Rowe Price or its agent prior to the close of the NYSE (normally 4 p.m. ET), which could differ from the day that the check is received at the post office box.

If you hold shares of a T. Rowe Price Institutional Fund through a retirement plan or financial intermediary, you must contact your retirement plan or financial intermediary with any inquiries.

Involuntary Redemptions and Share Class Conversions

Shares held by any investors that no longer meet the definition of an institutional investor or fail to meet or maintain their account(s) at the investment minimum are subject to involuntary redemption at any time.

For all accounts in Institutional Funds (except for F Class accounts), to help keep operating expenses lower, we ask that you maintain an account balance of at least \$1 million. If your investment falls below \$1 million (even if due to market depreciation), we have the right to redeem your account at the then-current net asset value after giving you 60 days to increase your balance.

The redemption of your account could result in a taxable gain or loss.

For any F Class accounts that are no longer held through an eligible financial intermediary, we have the right to convert your account to the Institutional Class following notice to the financial intermediary or shareholder.

Excessive and Short-Term Trading Policy

Excessive transactions and short-term trading can be harmful to fund shareholders in various ways, such as disrupting a fund's portfolio management strategies, increasing a fund's trading and other costs, and negatively affecting its performance. Short-term traders in funds that invest in foreign securities may seek to take advantage of developments overseas that could lead to an anticipated difference between the price of the funds' shares and price movements in foreign markets. While there is no assurance that T. Rowe Price can prevent all excessive and short-term trading, the Boards of the T. Rowe Price Funds have adopted the following trading limits that are designed to deter such activity and protect the funds' shareholders. The funds may revise their trading limits and procedures at any time as the Boards deem necessary or appropriate to better detect short-term trading that may adversely affect the funds, to comply with applicable regulatory requirements, or to impose additional or alternative restrictions.

Subject to certain exceptions, each T. Rowe Price Fund restricts a shareholder's purchases (including through exchanges) into a fund account for a period of 30 calendar days after the shareholder has redeemed or exchanged out of that same fund account (the "30-Day Purchase Block"). The calendar day after the date of redemption is considered Day 1 for purposes of computing the period before another purchase may be made.

General Exceptions As of the date of this prospectus, the following types of transactions generally are not subject to the funds' excessive and short-term trading policy:

- Shares purchased or redeemed in money market funds and ultra short-term bond funds;
- Shares purchased or redeemed through a systematic purchase or withdrawal plan;
- Checkwriting redemptions from bond and money market funds;
- Shares purchased through the reinvestment of dividends or capital gain distributions;

- Shares redeemed automatically by a fund to pay fund fees or shareholder account fees;
- Transfers and changes of account registration within the same fund;
- Shares purchased by asset transfer or direct rollover;
- Shares purchased or redeemed through IRA conversions and recharacterizations;
- Shares redeemed to return an excess contribution from a retirement account;
- Transactions in Section 529 college savings plans;
- Certain transactions in defined benefit and nonqualified plans, subject to prior approval by T. Rowe Price;
- Shares converted from one share class to another share class in the same fund;
- Shares of T. Rowe Price Funds that are purchased by another T. Rowe Price Fund, including shares purchased by T. Rowe Price fund-of-funds products, and shares purchased by discretionary accounts managed by T. Rowe Price or one of its affiliates (please note that shareholders of the investing T. Rowe Price Fund are still subject to the policy);
- Transactions initiated by the trustee or adviser to a donor-advised charitable gift fund as approved by T. Rowe Price; and
- Transactions having a value of \$5,000 or less (retirement plans, including those for which T. Rowe Price serves as recordkeeper, and other financial intermediaries may apply the excessive and short-term trading policy to transactions of any amount).

Transactions in certain rebalancing, asset allocation, wrap programs, and other advisory programs, as well as non-T. Rowe Price fund-of-funds products, may also be exempt from the 30-Day Purchase Block, subject to prior written approval by T. Rowe Price.

In addition to restricting transactions in accordance with the 30-Day Purchase Block, T. Rowe Price may, in its discretion, reject (or instruct a financial intermediary to reject) any purchase or exchange into a fund from a person (which includes individuals and entities) whose trading activity could disrupt the management of the fund or dilute the value of the fund's shares, including trading by persons acting collectively (for example, following the advice of a newsletter). Such persons may be barred, without prior notice, from further purchases of T. Rowe Price Funds for a period longer than 30 calendar days, or permanently.

Financial Intermediary Accounts If you invest in T. Rowe Price Funds through a financial intermediary, including a retirement plan, you should review the financial intermediary's or retirement plan's materials carefully or consult with the financial intermediary or plan sponsor directly to determine the trading policy that will apply to your trades in the T. Rowe Price Funds as well as any other rules or conditions on transactions that may apply. If T. Rowe Price is unable to identify a transaction placed through a financial intermediary as exempt from the excessive trading policy, the 30-Day Purchase Block may apply.

Financial intermediaries may maintain their underlying accounts directly with the fund, although they often establish an omnibus account (one account with the fund that represents multiple underlying shareholder accounts) on behalf of their customers. When financial intermediaries establish omnibus accounts in the T. Rowe Price Funds, T. Rowe Price is not able to monitor the trading activity of the underlying shareholders. However, T. Rowe Price monitors aggregate trading activity at the financial intermediary (omnibus account) level in an

attempt to identify activity that indicates potential excessive or short-term trading. If it detects such trading activity, T. Rowe Price may contact the financial intermediary to request personal identifying information and transaction histories for some or all underlying shareholders (including plan participants, if applicable) pursuant to a written agreement that T. Rowe Price has entered into with each financial intermediary. Any nonpublic personal information provided to the fund (for example, a shareholder's taxpayer identification number or transaction records) is subject to the fund's privacy policy. If T. Rowe Price believes that excessive or short-term trading has occurred and there is no exception for such trades under the funds' Excessive and Short-Term Trading Policy as previously described, it will instruct the financial intermediary to impose restrictions to discourage such practices and take appropriate action with respect to the underlying shareholder, including restricting purchases for 30 calendar days or longer. Each financial intermediary has agreed to execute such instructions pursuant to a written agreement. There is no assurance that T. Rowe Price will be able to properly enforce its excessive trading policies for omnibus accounts. Because T. Rowe Price generally relies on financial intermediaries to provide information and impose restrictions for omnibus accounts, its ability to monitor and deter excessive trading will be dependent upon the intermediaries' timely performance of their responsibilities.

T. Rowe Price may allow a financial intermediary or other third party to maintain restrictions on trading in the T. Rowe Price Funds that differ from the 30-Day Purchase Block. An alternative excessive trading policy would be acceptable to T. Rowe Price if it believes that the policy would provide sufficient protection to the T. Rowe Price Funds and their shareholders that is consistent with the excessive trading policy adopted by the funds' Boards.

Retirement Plan Accounts If shares are held in a retirement plan, generally the 30-Day Purchase Block applies only to shares redeemed by a participant-directed exchange to another fund. However, the 30-Day Purchase Block may apply to transactions other than exchanges depending on how shares of the plan are held at T. Rowe Price or the excessive trading policy applied by your plan's recordkeeper. An alternative excessive trading policy may apply to the T. Rowe Price Funds where a retirement plan has its own policy deemed acceptable to T. Rowe Price. You should contact T. Rowe Price or your plan recordkeeper to determine which of your transactions are subject to the funds' 30-Day Purchase Block or an alternative policy.

There is no guarantee that T. Rowe Price will be able to identify or prevent all excessive or short-term trades or trading practices.

Unclaimed Accounts and Uncashed Checks

If your account has no activity for a certain period of time and/or mail sent to you from T. Rowe Price (or your financial intermediary) is returned by the post office, T. Rowe Price (or your financial intermediary) may be required to transfer your account and any assets related to uncashed checks to the appropriate state under its abandoned property laws. To avoid such action, it is important to keep your account address up to date and periodically contact T. Rowe Price at least once every two years.

Delivery of Shareholder Documents

If two or more accounts own the same fund, share the same address, and T. Rowe Price reasonably believes that the two accounts are part of the same institution, we may economize on fund expenses by mailing only one shareholder report and prospectus for the fund. If you do not want your mailings to be “householded,” please call Financial Institution Services.

Signature Guarantees

A Medallion signature guarantee is designed to protect you and the T. Rowe Price Funds from fraud by verifying your signature.

A signature guarantee may be required in certain situations, such as:

- Remitting redemption proceeds to any person, address, or bank account not on file or
- Changing the account registration or broker-dealer of record for an account.

Consult Financial Institution Services for specific requirements.

The signature guarantee must be obtained from a financial institution that is a participant in a Medallion signature guarantee program. You can obtain a Medallion signature guarantee from certain banks, savings institutions, broker-dealers, and other guarantors acceptable to T. Rowe Price. When obtaining a Medallion signature guarantee, please discuss with the guarantor the dollar amount of your proposed transaction. It is important that the level of coverage provided by the guarantor’s stamp covers the dollar amount of the transaction or it may be rejected. We cannot accept guarantees from notaries public or organizations that do not provide reimbursement in the case of fraud.

Fund Operations and Shareholder Services

T. Rowe Price and The Bank of New York Mellon, subject to the oversight of T. Rowe Price, each provide certain accounting services to the T. Rowe Price Funds. T. Rowe Price Services, Inc., acts as the transfer agent and dividend disbursing agent and provides shareholder and administrative services to the funds. T. Rowe Price Retirement Plan Services, Inc., provides recordkeeping, sub-transfer agency, and administrative services for certain types of retirement plans investing in the funds. These companies receive compensation from the funds for their services. The F Class may also pay financial intermediaries for performing shareholder and administrative services for underlying shareholders in omnibus accounts. All of the fees discussed above are included in a fund’s financial statements and, except for funds that have an all-inclusive management fee, are also reflected in the “Other expenses” line that appears in a fund’s fee table in Section 1.

INFORMATION ON DISTRIBUTIONS AND TAXES

Each fund intends to qualify to be treated each year as a regulated investment company under Subchapter M of the Internal Revenue Code of 1986, as amended. In order to qualify, a fund must satisfy certain income, diversification, and distribution requirements. A regulated

investment company is not subject to U.S. federal income tax at the portfolio level on income and gains from investments that are distributed to shareholders. However, if a fund were to fail to qualify as a regulated investment company and was ineligible to or otherwise did not cure such failure, the result would be fund-level taxation and, consequently, a reduction in income available for distribution to the fund's shareholders.

To the extent possible, all net investment income and realized capital gains are distributed to shareholders.

Dividends and Other Distributions

Dividend and capital gain distributions are reinvested in additional fund shares in your account unless you select another option on your new account form. Reinvesting distributions results in compounding, which allows you to receive dividends and capital gain distributions on an increasing number of shares.

Distributions not reinvested are paid by check or transmitted electronically to your bank account. If the U.S. Postal Service cannot deliver your check or if your check remains uncashed for six months, the fund reserves the right to reinvest your distribution check in your account at the net asset value on the day of the reinvestment and to reinvest all subsequent distributions in additional shares of the fund. Interest will not accrue on amounts represented by uncashed distributions or redemption checks.

The following table provides details on dividend payments:

Dividend Payment Schedule	
Fund	Dividends
Bond funds	<ul style="list-style-type: none"> • Shares normally begin to earn dividends on the business day after payment is received by T. Rowe Price. • Declared daily and paid on the first business day of each month.
Stock funds	<ul style="list-style-type: none"> • Must be a shareholder on the dividend record date. • Declared and paid annually, if any, generally in December.

Shares of bond funds will earn dividends through the date of redemption. Shares redeemed on a Friday or prior to a holiday will continue to earn dividends until the next business day. Generally, if you redeem all of your bond fund shares at any time during the month, you will also receive all dividends earned through the date of redemption in the same check. When you redeem only a portion of your bond fund shares, all dividends accrued on those shares will be reinvested, or paid in cash, on the next dividend payment date. The funds do not pay dividends in fractional cents. Any dividend amount earned for a particular day on all shares held that is one-half of one cent or greater (for example, \$0.016) will be rounded up to the next whole cent (\$0.02), and any amount that is less than one-half of one cent (for example, \$0.014) will be rounded down to the nearest whole cent (\$0.01). Please note that if the dividend payable on all shares held is less than one-half of one cent for a particular day, no dividend will be earned for that day.

If you purchase and redeem your shares through a financial intermediary, consult your financial intermediary to determine when your shares begin and stop accruing dividends as the information previously described may vary.

Capital Gain Payments

A capital gain or loss is the difference between the purchase and sale price of a security. If a fund has net capital gains for the year (after subtracting any capital losses), they are usually declared and paid in December to shareholders of record on a specified date that month. If a second distribution is necessary, it is generally paid the following year. A fund may have to make additional capital gain distributions, if necessary, to comply with the applicable tax law.

Tax Information

In most cases, you will be provided information for your tax filing needs no later than mid-February.

If you invest in the fund through a tax-deferred account, such as an IRA or employer-sponsored retirement plan, you will not be subject to tax on dividends and distributions from the fund or the sale of fund shares if those amounts remain in the tax-deferred account. You may receive a Form 1099-R or other Internal Revenue Service forms, as applicable, if any portion of the account is distributed to you.

If you invest in the fund through a taxable account, you generally will be subject to tax when:

- You sell fund shares, including an exchange from one fund to another.
- The fund makes dividend or capital gain distributions.

For individual shareholders, a portion of ordinary dividends representing “qualified dividend income” received by the fund may be subject to tax at the lower rates applicable to long-term capital gains rather than ordinary income. You may report it as “qualified dividend income” in computing your taxes, provided you have held the fund shares on which the dividend was paid for more than 60 days during the 121-day period beginning 60 days before the ex-dividend date. Ordinary dividends that do not qualify for this lower rate are generally taxable at the investor’s marginal income tax rate. This includes the portion of ordinary dividends derived from interest, short-term capital gains, income and gains from derivatives, distributions from nonqualified foreign corporations, distributions from real estate investment trusts, and dividends received by the fund from stocks that were on loan. Little, if any, of the ordinary dividends paid by the bond funds or money market funds is expected to qualify for this lower rate.

For corporate shareholders, a portion of ordinary dividends may be eligible for the deduction for dividends received by corporations to the extent the fund’s income consists of dividends paid by U.S. corporations. Little, if any, of the ordinary dividends paid by the international stock or bond funds is expected to qualify for this deduction.

A 3.8% net investment income tax is imposed on net investment income, including interest, dividends, and capital gains of U.S. individuals with income exceeding \$200,000 (or \$250,000 if married filing jointly) and of estates and trusts.

If you hold your fund through a financial intermediary, the financial intermediary is responsible for providing you with any necessary tax forms. You should contact your financial intermediary for the tax information that will be sent to you and reported to the Internal Revenue Service.

Taxes on Fund Redemptions

When you sell shares in any fund, you may realize a gain or loss. An exchange from one fund to another in a taxable account is also a sale for tax purposes.

All or a portion of the loss realized from a sale or exchange of your fund shares may be disallowed under the “wash sale” rule if you purchase substantially identical shares within a 61-day period beginning 30 days before and ending 30 days after the date on which the shares are sold or exchanged. Shares of the same fund you acquire through dividend reinvestment are shares purchased for the purpose of the wash sale rule and may trigger a disallowance of the loss for shares sold or exchanged within the 61-day period of the dividend reinvestment. Any loss disallowed under the wash sale rule is added to the cost basis of the purchased shares.

T. Rowe Price (or your financial intermediary) will make available to you Form 1099-B, if applicable, no later than mid-February, providing certain information for each sale you made in the fund during the prior year. Unless otherwise indicated on your Form 1099-B, this information will also be reported to the Internal Revenue Service. For mutual fund shares acquired prior to 2012 in most accounts established or opened by exchange in 1984 or later, our Form 1099-B will provide you with the gain or loss on the shares you sold during the year based on the average cost single category method. This information on average cost and gain or loss from sale is not reported to the Internal Revenue Service. For these mutual fund shares acquired prior to 2012, you may calculate the cost basis using other methods acceptable to the Internal Revenue Service, such as specific identification.

For mutual fund shares acquired after 2011, federal income tax regulations require us to report the cost basis information on Form 1099-B using a cost basis method selected by the shareholder in compliance with such regulations or, in the absence of such selected method, our default method if you acquire your shares directly from T. Rowe Price. Our default method is average cost. For any fund shares acquired through a financial intermediary after 2011, you should check with your financial intermediary regarding the applicable cost basis method. You should, however, note that the cost basis information reported to you may not always be the same as what you should report on your tax return because the rules applicable to the determination of cost basis on Form 1099-B may be different from the rules applicable to the determination of cost basis for reporting on your tax return. Therefore, you should save your transaction records to make sure the information reported on your tax return is accurate. T. Rowe Price and financial intermediaries are not required to issue a Form 1099-B to report sales of money market fund shares.

To help you maintain accurate records, T. Rowe Price will make available to you a confirmation promptly following each transaction you make (except for systematic purchases and systematic redemptions) and a year-end statement detailing all of your transactions in each

fund account during the year. If you hold your fund through a financial intermediary, the financial intermediary is responsible for providing you with transaction confirmations and statements.

Taxes on Fund Distributions

T. Rowe Price (or your financial intermediary) will make available to you, as applicable, generally no later than mid-February, a Form 1099-DIV, or other Internal Revenue Service forms, as required, indicating the tax status of any income dividends, dividends exempt from federal income taxes, and capital gain distributions made to you. This information will be reported to the Internal Revenue Service. Taxable distributions are generally taxable to you in the year in which they are paid. A dividend declared in October, November, or December and paid in the following January is generally treated as taxable to you as if you received the distribution in December. Dividends from tax-free funds are generally expected to be tax-exempt for federal income tax purposes. Your bond fund dividends for each calendar year will include dividends accrued up to the first business day of the next calendar year. Ordinary dividends and capital gain dividends may also be subject to state and local taxes. You will be sent any additional information you need to determine your taxes on fund distributions, such as the portion of your dividends, if any, that may be exempt from state and local income taxes.

Taxable distributions are subject to tax whether reinvested in additional shares or received in cash.

The tax treatment of a capital gain distribution is determined by how long the fund held the portfolio securities, not how long you held the shares in the fund. Short-term (one year or less) capital gain distributions are taxable at the same rate as ordinary income, and gains on securities held more than one year are taxed at the lower rates applicable to long-term capital gains. If you realized a loss on the sale or exchange of fund shares that you held six months or less, your short-term capital loss must be reclassified as a long-term capital loss to the extent of any long-term capital gain distributions received during the period you held the shares. For funds investing in foreign instruments, distributions resulting from the sale of certain foreign currencies, currency contracts, and the foreign currency portion of gains on debt instruments are taxed as ordinary income. Net foreign currency losses may cause monthly or quarterly dividends to be reclassified as returns of capital.

A fund's distributions that have exceeded the fund's earnings and profits for the relevant tax year may be treated as a return of capital to its shareholders. A return of capital distribution is generally nontaxable but reduces the shareholder's cost basis in the fund, and any return of capital in excess of the cost basis will result in a capital gain.

The tax status of certain distributions may be recharacterized on year-end tax forms, such as your Form 1099-DIV. Distributions made by a fund may later be recharacterized for federal income tax purposes—for example, from taxable ordinary income dividends to returns of capital. A recharacterization of distributions may occur for a number of reasons, including the recharacterization of income received from underlying investments, such as real estate investment trusts ("REITs"), and distributions that exceed taxable income due to losses from

foreign currency transactions or other investment transactions. Certain funds, including international bond funds and funds that invest in REITs, are more likely to recharacterize a portion of their distributions as a result of their investments.

If the fund qualifies and elects to pass through nonrefundable foreign income taxes paid to foreign governments during the year, your portion of such taxes will be reported to you as taxable income. However, you may be able to claim an offsetting credit or deduction on your tax return for those amounts. There can be no assurance that a fund will meet the requirements to pass through foreign income taxes paid.

If you are subject to backup withholding, we will have to withhold a 24% backup withholding tax on distributions and, in some cases, redemption payments. You may be subject to backup withholding if we are notified by the Internal Revenue Service to withhold, you have failed one or more tax certification requirements, or our records indicate that your tax identification number is missing or incorrect. Backup withholding is not an additional tax and is generally available to credit against your federal income tax liability with any excess refunded to you by the Internal Revenue Service.

Tax Consequences of Hedging

Entering into certain transactions involving options, futures, swaps, and forward currency exchange contracts may result in the application of the mark-to-market and straddle provisions of the Internal Revenue Code. These provisions could result in a fund being required to distribute gains on such transactions even though it did not close the contracts during the year or receive cash to pay such distributions. The fund may not be able to reduce its distributions for losses on such transactions to the extent of unrealized gains in offsetting positions.

Tax Consequences of Shareholder Turnover

If the fund's portfolio transactions result in a net capital loss (i.e., an excess of capital losses over capital gains) for any year, the loss may be carried forward and used to offset future realized capital gains. However, its ability to carry forward such losses will be limited if the fund experiences an "ownership change" within the meaning of the Internal Revenue Code. An ownership change generally results when shareholders owning 5% or more of the fund increase their aggregate holdings by more than 50 percentage points over a three-year period.

Because Institutional Funds may have only a few large shareholders, an ownership change can occur in the normal course of shareholder purchases and redemptions. The fund undertakes no obligation to avoid or prevent an ownership change. Moreover, because of circumstances beyond the fund's control, there can be no assurance that the fund will not experience, or has not already experienced, an ownership change. An ownership change can reduce the fund's ability to offset capital gains with losses, which could increase the amount of taxable gains that could be distributed to shareholders.

Tax Effect of Buying Shares Before an Income Dividend or Capital Gain Distribution

If you buy shares shortly before or on the record date—the date that establishes you as the person to receive the upcoming distribution—you may receive a portion of the money you just

invested in the form of a taxable distribution. Therefore, you may wish to find out a fund's record date before investing. In addition, a fund's share price may, at any time, reflect undistributed capital gains or income and unrealized appreciation, which may result in future taxable distributions. Such distributions can occur even in a year when the fund has a negative return.

RIGHTS RESERVED BY THE FUNDS

T. Rowe Price Funds and their agents, in their sole discretion, reserve the following rights: (1) to waive or lower investment minimums; (2) to accept initial purchases by telephone; (3) to refuse any purchase or exchange order; (4) to cancel or rescind any purchase or exchange order placed through a financial intermediary no later than the business day after the order is received by the financial intermediary (including, but not limited to, orders deemed to result in excessive trading, market timing, or 5% ownership); (5) to cease offering fund shares at any time to all or certain groups of investors; (6) to freeze any account and suspend account services when notice has been received of a dispute regarding the ownership of the account, or a legal claim against an account, upon initial notification to T. Rowe Price of a shareholder's death until T. Rowe Price receives required documentation in correct form, or if there is reason to believe a fraudulent transaction may occur; (7) to otherwise modify the conditions of purchase and modify or terminate any services at any time; (8) to waive any wire, small account, maintenance, or fiduciary fees charged to a group of shareholders; (9) to act on instructions reasonably believed to be genuine; (10) to involuntarily redeem an account at the net asset value calculated the day the account is redeemed, in cases of threatening conduct, suspected fraudulent or illegal activity, or if the fund or its agent is unable, through its procedures, to verify the identity of the person(s) or entity opening an account; and (11) for money market funds, to suspend redemptions to facilitate an orderly liquidation.

The fund's Statement of Additional Information, which contains a more detailed description of the fund's operations, investment restrictions, policies and practices, has been filed with the SEC. The Statement of Additional Information is incorporated by reference into this prospectus, which means that it is legally part of this prospectus even if you do not request a copy. Further information about the fund's investments, including a review of market conditions and the manager's recent investment strategies and their impact on performance during the past fiscal year, is available in the annual and semiannual shareholder reports. These documents and updated performance information are available through troweprice.com. For inquiries about the fund and to obtain free copies of any of these documents, call 1-800-638-8790. If you invest in the fund through a financial intermediary, you should contact your financial intermediary for copies of these documents.

Fund reports and other fund information are available on the EDGAR Database on the SEC's Internet site at <http://www.sec.gov>. Copies of this information may be obtained, after paying a duplicating fee, by electronic request at publicinfo@sec.gov.
