Benchmark	Bloomberg Barclays Global Agg ex USD - USD Hdg Index
Expense Information (as of the most recent Prospectus)	0.50%
Fiscal Year End	December 31
12B-1 Fee	-

## MARKET COMMENTARY

International government bond markets delivered negative returns in local currency terms in March. The period was dominated by volatility and challenging liquidity conditions across fixed income markets. The spread of the coronavirus triggered global recession fears, initially supporting core asset prices. However, it also generated huge demand for cash, putting a strain on trading in some of the most liquid bond markets, pushing some prices down. The strengthening U.S. dollar through the period also weighed on returns.

Eurozone government bonds posted a negative overall return in local currency terms in March. Yields spiked in the middle of the month as major governments responded to the worsening coronavirus outbreak by implementing severe public movement restrictions and forcing shutdowns of large parts of their own economies. The developments increased demand for cash driving investors to sell assets across all classes, even core eurozone bonds, such as bunds. Looser fiscal policies from eurozone governments also added upward pressure on yields. Peripheral eurozone government bond yields largely tracked their core bond counterparts, with the outbreak worsening notably in both Spain and Italy. The announcement of a massive monetary stimulus package by the European Central Bank (ECB) without country limits helped to bring yields back down toward the end of the month, however.

Japanese government bonds (JGBs) delivered negative returns in local currency terms in March. Yields rose across most maturities as investors looked past new easing measures announced by the Bank of Japan (BoJ) and dumped fixed income securities to cover costs from a global market rout sparked by the coronavirus pandemic. In the UK and Canada, however, yields ended the period lower as central banks in both countries responded with new quantitative easing programs. Canadian bond yields faced additional downward pressure thanks to the collapse in oil prices during the month.

## PERFORMANCE

**Definitions**

Weighted Average Effective Duration is a calculation that seeks to measure the price sensitivity of a bond Fund to changes in interest rates. In general, the longer the average duration, the greater the Fund's sensitivity to interest rates.
