Performance data quoted represents past performance and is not a reliable indicator of future performance. Investment return and principal value will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. Current performance may be lower or higher than the performance data quoted. To obtain the most recent month-end performance, visit troweprice.com. Consider the investment objectives, risks, and charges and expenses carefully before investing. For a prospectus or, if available, a summary prospectus containing this and other information, call 1-800-638-7780 or visit troweprice.com. Read it carefully. The Fund's total return figures reflect the reinvestment of dividends and capital gains, if any.

The Global Stock Fund - Advisor Class started operations on 4/28/06. It shares the portfolio of an existing fund (referred to as "investor class"). The average annual total return figures have been calculated using the performance data of the investor class up to the inception date of the Advisor Class and the actual performance results of the Advisor class since that date. The performance results have not been adjusted to reflect the 12b-1 fee associated with the Advisor Class; had this fee been included, performance would have been lower.

All investments are subject to risk, including the possible loss of the money you invest.

The fund(s) may have other share classes available that offer different investment minimums and fees. See the prospectus for details. For Sourcing Information, please see Additional Disclosures.

MARKET COMMENTARY

Global equities produced robust returns in June. Markets mostly shrugged off coronavirus concerns amid many countries' gradual reopening of their economies and the continued extraordinary support of central bank and government stimulus. U.S. equities produced positive returns in June. After two months of vigorous gains driven by massive Federal Reserve and federal government stimulus, the equity market's recovery from late-March lows decelerated. However, the rally continued with the support of some better-than-expected economic data. On the other hand, Federal Reserve officials' downbeat assessment of near- and medium-term economic prospects weighed on the market, as did reports of increasing coronavirus cases and hospitalizations in several states, especially in the south and southwest. Developed European stock markets were mostly positive, with Italian shares performing the best. The European Central Bank (ECB) increased its pandemic emergency purchase program, extended it until at least June 2021, and pledged to reinvest proceeds from maturing bonds until the end of 2022. Several developed Asian markets were strongly positive, though shares in regional heavyweight Japan were flat. Macroeconomic concerns, highlighted by a resurgence of the coronavirus in parts of the U.S., and disappointing Japanese economic data weighed on investor sentiment. Emerging markets stocks significantly outperformed developed markets. In Asia, Chinese equities outperformed, despite tensions with the U.S. concerning China's introduction of a national security law in Hong Kong. Economic news over the month included the release of data that indicated an expansion of factory activity. In Latin America, Brazilian equities produced strong gains despite a rising number of coronavirus cases in the country. On the other hand, Mexican shares underperformed as peso weakness weighed on returns in U.S. dollars. In emerging Europe, Russian equities underperformed in spite of a continued rise in the price of oil.

Sector performance in the MSCI All Country World Index was mostly positive. Information technology, consumer discretionary, and materials were the strongest performers, while utilities and health care lost ground.

RISK RETURN CHARACTERISTICS

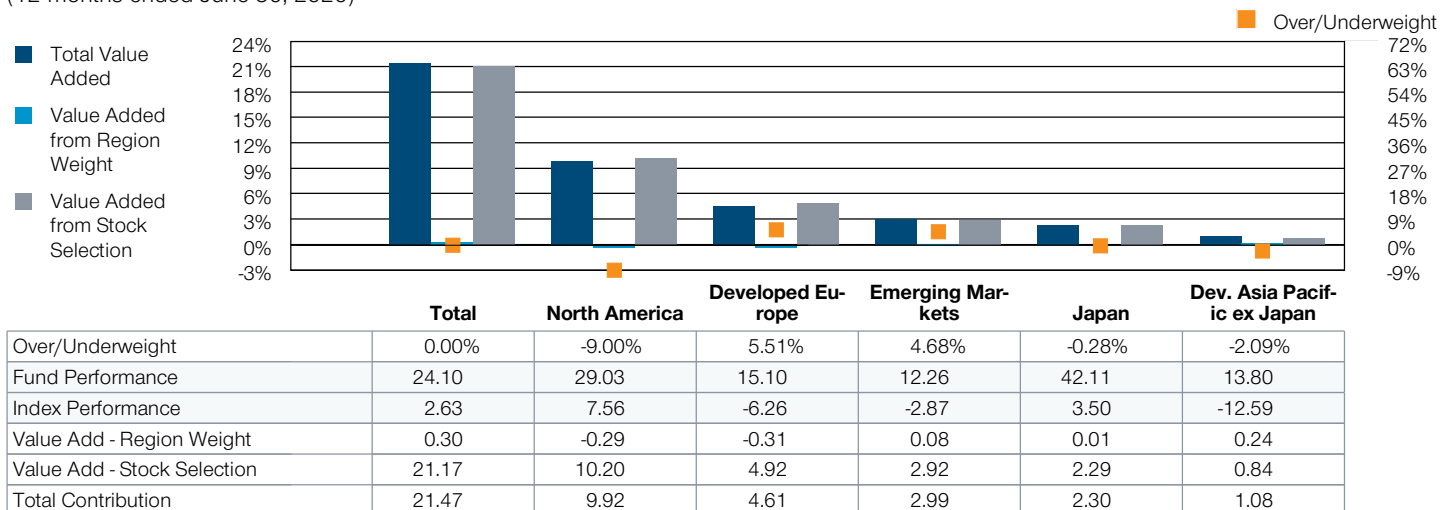

(Five Years ended June 30, 2020)

(12 months ended June 30, 2020)

Past performance is not a reliable indicator of future performance. Numbers may not total due to rounding; all other numbers are percentages. Analysis represents the total performance of the portfolio as calculated by the FactSet attribution model and is inclusive of other assets that will not receive a classification assignment in the detailed structure shown. Returns will not match official T. Rowe Price performance because FactSet uses different exchange rate sources and does not capture intra-day trading. Performance for each security is obtained in the local currency and, if necessary, is converted using an exchange rate determined by an independent third party. Figures are shown with gross dividends reinvested. Sources: Financial data and analytics provider FactSet. Copyright 2020 FactSet. All Rights Reserved. MSCI/S&P GICS Sectors; Analysis by T. Rowe Price Associates, Inc. T. Rowe Price uses the current MSCI/S&P Global Industry Classification Standard (GICS) for sector and industry reporting. T. Rowe Price will adhere to all updates to GICS for prospective reporting. Figures are shown gross of fees. Returns would be lower as a result of the deduction of such fees. Performance returns are in USD. For Sourcing Information, please see Additional Disclosures.

Definitions

Active Share is a holdings based measure of active management representing the percentage of a portfolio's holdings that differ from those in its benchmark. Compared to tracking error, which measures the standard deviation of the difference in a manager's returns versus the Benchmark returns, Active Share allows investors to get a clearer understanding of what a manager is doing to drive performance, rather than drawing conclusions from observed returns. The greater the difference between the asset composition of a product and its benchmark, the greater the active share is.
