Source for performance: T. Rowe Price. Fund performance is calculated using the official NAV with distributions reinvested, if any. Sales charges, taxes and other locally applied costs have not been deducted and if applicable, they will reduce the performance figures.

Index returns are shown with gross income reinvested.

The indicative benchmark is 60% MSCI AC World Index (Developed Markets only hedged to USD), 28% Bloomberg Barclays Global Aggregate Bond Index (hedged to USD) and 12% USD LIBOR.

The indicative benchmark of the fund is not a formal benchmark but is shown for comparison purposes.

Risks - The following risks are materially relevant to the fund (refer to prospectus for further details):

China Interbank Bond Market risk - market volatility and potential lack of liquidity due to low trading volume of certain debt securities in the China Interbank Bond Market may result in prices of certain debt securities traded on such market fluctuating significantly. **Country risk (Russia and Ukraine)** - in these countries, risks associated with custody, counterparties and market volatility are higher than in developed countries. **Credit risk** - a bond or money market security could lose value if the issuer's financial health deteriorates. **Currency risk** - changes in currency exchange rates could reduce investment gains or increase investment losses. **Default risk** - the issuers of certain bonds could become unable to make payments on their bonds. **Derivatives risk** - derivatives may result in losses that are significantly greater than the cost of the derivative. **Emerging markets risk** - emerging markets are less established than developed markets and therefore involve higher risks. **Interest rate risk** - when interest rates rise, bond values generally fall. This risk is generally greater the longer the maturity of a bond investment and the higher its credit quality. **Liquidity risk** - any security could become hard to value or to sell at a desired time and price. **Small and mid-cap risk** - stocks of small and mid-size companies can be more volatile than stocks of larger companies. **Style risk** - different investment styles typically go in and out of favour depending on market conditions and investor sentiment.
